User Manual

COPYRIGHT ©2016 Hangzhou Hikvision Digital Technology Co., Ltd.

ALL RIGHTS RESERVED.

Any and all information, including, among others, wordings, pictures, graphs are the properties of Hangzhou Hikvision Digital Technology Co., Ltd. or its subsidiaries (hereinafter referred to be “Hikvision”). This user manual (hereinafter referred to be “the Manual”) cannot be reproduced, changed, translated, or distributed, partially or wholly, by any means, without the prior written permission of Hikvision. Unless otherwise stipulated, Hikvision does not make any warranties, guarantees or representations, express or implied, regarding to the Manual.

About this Manual

This Manual is applicable to Network Multi-Sensor Panoramic Dome Camera.

The Manual includes instructions for using and managing the product. Pictures, charts, images and all other information hereinafter are for description and explanation only.

The information contained in the Manual is subject to change, without notice, due to firmware updates or other reasons. Please find the latest version in the company website (<http://overseas.hikvision.com/en/>).

Please use this user manual under the guidance of professionals.

Trademarks Acknowledgement

Legal Disclaimer

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND FIRMWARE, IS PROVIDED “AS IS”, WITH ALL FAULTS AND ERRORS, AND HIKVISION MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY,

FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF THIRD PARTY. IN NO EVENT WILL HIKVISION, ITS DIRECTORS, OFFICERS, EMPLOYEES, OR AGENTS BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA OR DOCUMENTATION, IN CONNECTION WITH THE USE OF THIS PRODUCT, EVEN IF HIKVISION HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

REGARDING TO THE PRODUCT WITH INTERNET ACCESS, THE USE OF PRODUCT SHALL BE WHOLLY AT YOUR OWN RISKS. HIKVISION SHALL NOT TAKE ANY RESPONSIBILITIES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER ATTACK, HACKER ATTACK, VIRUS INSPECTION, OR OTHER INTERNET SECURITY RISKS; HOWEVER, HIKVISION WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.

SURVEILLANCE LAWS VARY BY JURISDICTION. PLEASE CHECK ALL RELEVANT LAWS IN YOUR JURISDICTION BEFORE USING THIS PRODUCT IN ORDER TO ENSURE THAT YOUR USE CONFORMS THE APPLICABLE LAW. HIKVISION SHALL NOT BE LIABLE IN THE EVENT THAT THIS PRODUCT IS USED WITH ILLEGITIMATE PURPOSES.

IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATER PREVAILS.

Regulatory Information

FCC Information

FCC compliance: This equipment has been tested and found to comply with the limits for a digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance

with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Conditions

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement

This product and - if applicable - the supplied accessories too are marked with "CE" and comply therefore with the applicable harmonized European standards listed under the EMC Directive 2004/108/EC, the RoHS Directive 2011/65/EU.

2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info.

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: www.recyclethis.info.

Industry Canada ICES-003 Compliance

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.

Safety Instruction

These instructions are intended to ensure that the user can use the product correctly to avoid danger or property loss.

The precaution measure is divided into ‘Warnings’ and ‘Cautions’:

Warnings: Serious injury or death may be caused if any of these warnings are neglected.

Cautions: Injury or equipment damage may be caused if any of these cautions are neglected.

	
Warnings Follow these safeguards to prevent serious injury or death.	Cautions Follow these precautions to prevent potential injury or material damage.

Warnings:

- Please adopt the power adapter which can meet the safety extra low voltage (SELV) standard. And source with 12 VDC or 24 VAC (depending on models) according to the IEC60950-1 and Limited Power Source standard.
- To reduce the risk of fire or electrical shock, do not expose this product to rain or moisture.
- This installation should be made by a qualified service person and should conform to all the local codes.
- Please install blackouts equipment into the power supply circuit for convenient supply interruption.
- Please make sure that the ceiling can support more than 50(N) Newton gravities if the camera is fixed to the ceiling.
- If the product does not work properly, please contact your dealer or the nearest

service center. Never attempt to disassemble the camera yourself. (We shall not assume any responsibility for problems caused by unauthorized repair or maintenance.)

Cautions:

- Make sure the power supply voltage is correct before using the camera.
- Do not drop the camera or subject it to physical shock.
- Do not touch sensor modules with fingers. If cleaning is necessary, use a clean cloth with a bit of ethanol and wipe it gently. If the camera will not be used for an extended period of time, put on the lens cap to protect the sensor from dirt.
- Do not aim the camera lens at the strong light such as sun or incandescent lamp. The strong light can cause fatal damage to the camera.
- The sensor may be burned out by a laser beam, so when any laser equipment is being used, make sure that the surface of the sensor not be exposed to the laser beam.
- Do not place the camera in extremely hot, cold temperatures (the operating temperature should be between -30 °C to +60 °C, or -40 °C to +60 °C if the camera model has an “H” in its suffix), dusty or damp environment, and do not expose it to high electromagnetic radiation.
- To avoid heat accumulation, ensure there is good ventilation to the device.
- Keep the camera away from water and any liquids.
- While shipping, pack the camera in its original, or equivalent, packing materials. Or packing the same texture.
- Improper use or replacement of the battery may result in hazard of explosion. Please use the manufacturer recommended battery type.

Notes:

For the camera supports IR, you are required to pay attention to the following precautions to prevent IR reflection:

- Dust or grease on the dome cover will cause IR reflection. Please do not remove

the dome cover film until the installation is finished. If there is dust or grease on the dome cover, clean the dome cover with clean soft cloth and isopropyl alcohol.

- Make certain the installation location does not have reflective surfaces of objects too close to the camera. The IR light from the camera may reflect back into the lens causing reflection.
- The foam ring around the lens must be seated flush against the inner surface of the bubble to isolate the lens from the IR LEDES. Fasten the dome cover to camera body so that the foam ring and the dome cover are attached seamlessly.

Chapter 1 System Requirement

Operating System: Microsoft Windows XP SP1 and above version

CPU: 2.0 GHz or higher

RAM: 1G or higher

Display: 1024×768 resolution or higher

Web Browser: Internet Explorer 8.0 and above version, Apple Safari 5.0.2 and above version, Mozilla Firefox 5.0 and above version and Google Chrome 18 and above version.

Chapter 2 Network Connection

Before you start:

- If you want to set the network camera via a LAN (Local Area Network), please refer to *Section 2.1 Setting the Network Camera over the LAN*.
- If you want to set the network camera via a WAN (Wide Area Network), please refer to *Section 2.2 Setting the Network Camera over the WAN*.

Notes:

- You shall acknowledge that the use of the product with Internet access might be under network security risks. For avoidance of any network attacks and information leakage, please strengthen your own protection. If the product does not work properly, please contact with your dealer or the nearest service center.
- To ensure the network security of the network camera, we recommend you to have the network camera assessed and maintained termly. You can contact us if you need such service.

2.1 Setting the Network Camera over the LAN

Purpose:

To view and configure the camera via a LAN, you need to connect the network camera in the same subnet with your computer, and install the SADP or iVMS-4200 software to search and change the IP of the network camera.

Note: For the detailed introduction of SADP, please refer to Appendix 1.

2.1.1 Wiring over the LAN

The following figures show the two ways of cable connection of a network camera and a computer:

Purpose:

- To test the network camera, you can directly connect the network camera to the

computer with a network cable as shown in Figure 2-1.

- Refer to the Figure 2-2 to set network camera over the LAN via a switch or a router.

Figure 2-1 Connecting Directly

Figure 2-2 Connecting via a Switch or a Router

2.1.2 Activating the Camera

You are required to activate the camera first by setting a strong password for it before you can use the camera.

Activation via Web Browser, Activation via SADP, and Activation via Client Software are all supported.

❖ Activation via Web Browser

Steps:

1. Power on the camera, and connect the camera to the network.
2. Input the IP address into the address bar of the web browser, and click Enter to enter the activation interface.

Notes:

- The default IP address of the camera is 192.168.1.64.
- For the camera enables the DHCP by default, the IP address is allocated automatically. And you need to activate the camera via SADP software. Please refer to

the following chapter for Activation via SADP.

Figure 2-3 Activation via Web Browser

3. Create a password and input the password into the password field.

STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

4. Confirm the password.

5. Click OK to save the password and enter the live view interface.

❖ Activation via SADP Software

SADP software is used for detecting the online device, activating the camera, and resetting the password.

Get the SADP software from the supplied disk or the official website, and install the SADP according to the prompts. Follow the steps to activate the camera.

Steps:

1. Run the SADP software to search the online devices.
2. Check the device status from the device list, and select the inactive device.

Figure 2-4 SADP Interface

3. Create a password and input the password in the password field, and confirm the password.

STRONG PASSWORD RECOMMENDED– We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

4. Click **OK** to save the password.

You can check whether the activation is completed on the popup window. If activation failed, please make sure that the password meets the requirement and try again.

5. Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the checkbox of Enable DHCP.

Modify Network Parameters

IP Address: 192.168.1.64

Port: 8000

Subnet Mask: 255.255.255.0

IPv4 Gateway: 192.168.1.1

IPv6 Address: ::

IPv6 Gateway: ::

IPv6 Prefix Length: 0

HTTP Port: 80

Device Serial No.: XX-XXXXXXX-XXXXXXX

Enable DHCP

Password

Figure 2-5 Modify the IP Address

6. Input the password and click the **Save** button to activate your IP address modification.

❖ Activation via Client Software

The client software is versatile video management software for multiple kinds of devices.

Get the client software from the supplied disk or the official website, and install the software according to the prompts. Follow the steps to activate the camera.

Steps:

1. Run the client software and the control panel of the software pops up, as shown in the figure below.

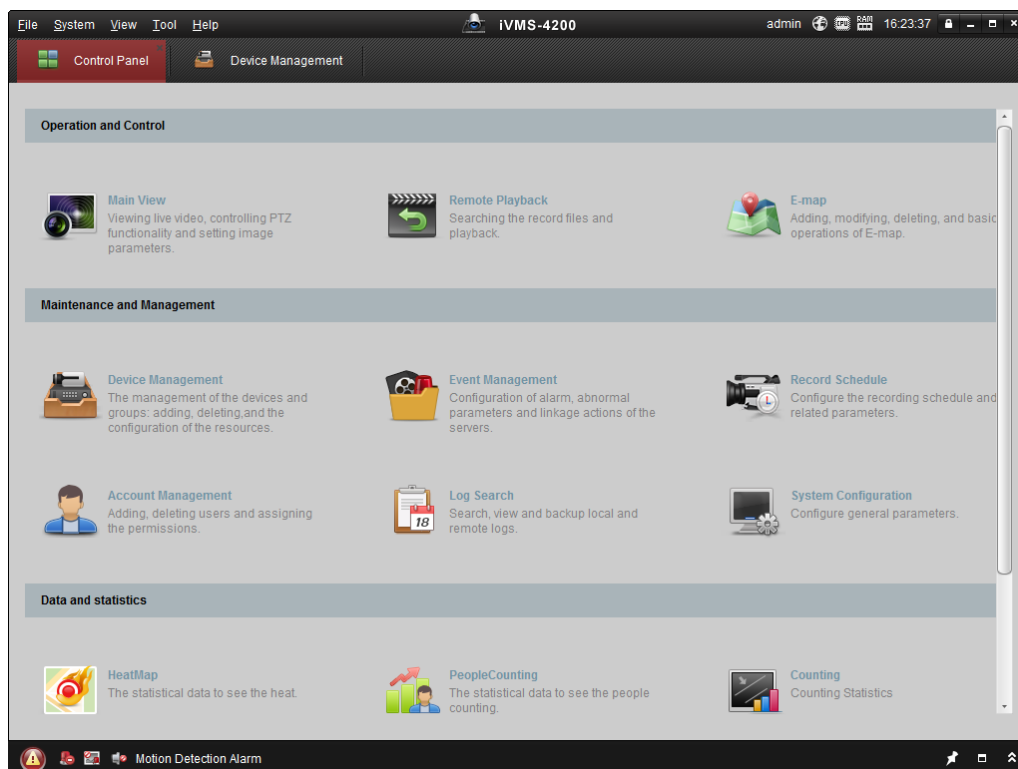

Figure 2-6 Control Panel

2. Click the **Device Management** icon to enter the Device Management interface, as shown in the figure below.

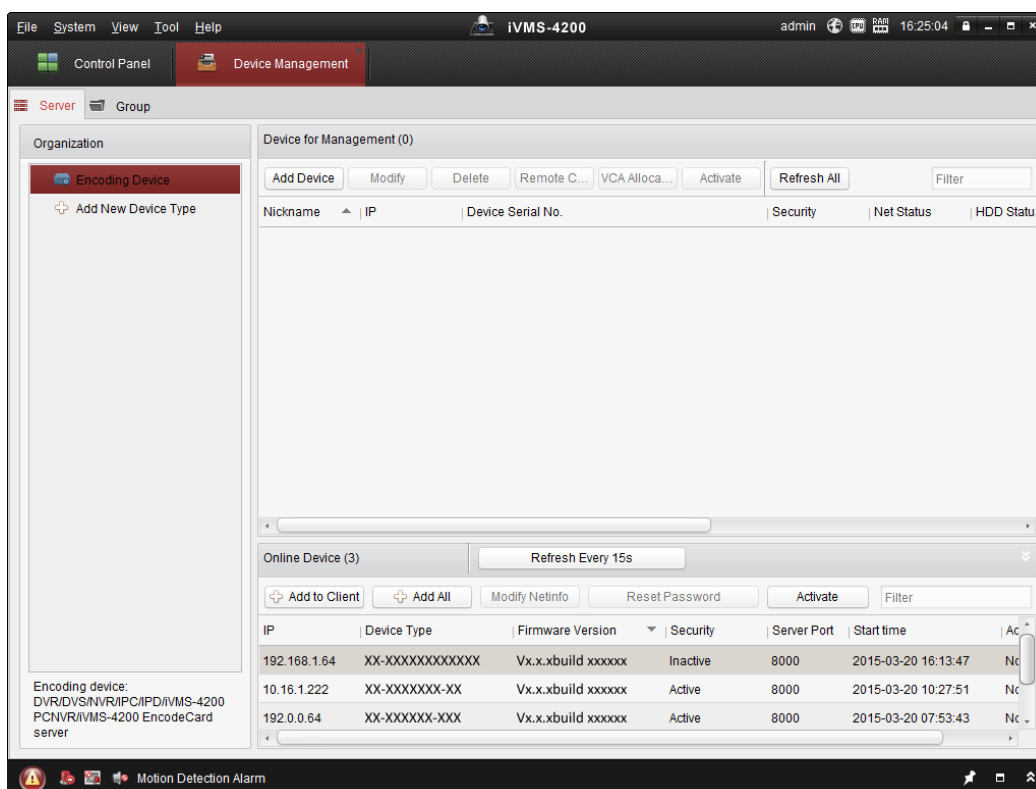

Figure 2-7 Device Management Interface

3. Check the device status from the device list, and select an inactive device.
4. Click the **Activate** button to pop up the Activation interface.
5. Create a password and input the password in the password field, and confirm the password.

 **STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. We recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Figure 2-8 Activation Interface (Client Software)

6. Click **OK** button to start activation.
7. Click the Modify Netinfo button to pop up the Network Parameter Modification interface, as shown in the figure below.

Figure 2-9 Modifying the Network Parameters

8. Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the checkbox of Enable DHCP.
9. Input the password to activate your IP address modification.

2.2 Setting the Network Camera over the WAN

Purpose:

This section explains how to connect the network camera to the WAN with a static IP or a dynamic IP.

2.2.1 Static IP Connection

Before you start:

Please apply a static IP from an ISP (Internet Service Provider). With the static IP address, you can connect the network camera via a router or connect it to the WAN directly.

- **Connecting the network camera via a router**

Steps:

1. Connect the network camera to the router.

2. Assign a LAN IP address, the subnet mask and the gateway. Refer to Section 2.1.2 for detailed IP address configuration of the network camera.
3. Save the static IP in the router.
4. Set port mapping, e.g., 80, 8000, and 554 ports. The steps for port mapping vary according to the different routers. Please call the router manufacturer for assistance with port mapping.

Note: Refer to Appendix 2 for detailed information about port mapping.

5. Visit the network camera through a web browser or the client software over the internet.

Figure 2-10 Accessing the Camera through Router with Static IP

- **Connecting the network camera with static IP directly**

You can also save the static IP in the camera and directly connect it to the internet without using a router. Refer to Section 2.1.2 for detailed IP address configuration of the network camera.

Figure 2-11 Accessing the Camera with Static IP Directly

2.2.2 Dynamic IP Connection

Before you start:

Please apply a dynamic IP from an ISP. With the dynamic IP address, you can connect the network camera to a modem or a router.

- **Connecting the network camera via a router**

Steps:

1. Connect the network camera to the router.
2. In the camera, assign a LAN IP address, the subnet mask and the gateway. Refer to Section 2.1.2 for detailed IP address configuration of the network camera.
3. In the router, set the PPPoE user name, password and confirm the password.
4. Set port mapping. E.g. 80, 8000, and 554 ports. The steps for port mapping vary depending on different routers. Please call the router manufacturer for assistance with port mapping.

Note: Refer to Appendix 2 for detailed information about port mapping.

5. Apply a domain name from a domain name provider.
6. Configure the DDNS settings in the setting interface of the router.
7. Visit the camera via the applied domain name.

● Connecting the network camera via a modem

Purpose:

This camera supports the PPPoE auto dial-up function. The camera gets a public IP address by ADSL dial-up after the camera is connected to a modem. You need to configure the PPPoE parameters of the network camera. Refer to *Section 6.1.3*

Configuring PPPoE Settings for detailed configuration.

Figure 2-12 Accessing the Camera with Dynamic IP

Note: The obtained IP address is dynamically assigned via PPPoE, so the IP address always changes after rebooting the camera. To solve the inconvenience of the dynamic IP, you need to get a domain name from the DDNS provider (E.g. DynDns.com). Please follow the steps below for normal domain name resolution and private domain name resolution to solve the problem.

◆ Normal Domain Name Resolution

Figure 2-13 Normal Domain Name Resolution

Steps:

1. Apply a domain name from a domain name provider.
2. Configure the DDNS settings in the **DDNS Settings** interface of the network camera. Refer to *Section 6.1.2 Configuring DDNS Settings* for detailed configuration.
3. Visit the camera via the applied domain name.

◆ Private Domain Name Resolution

Figure 2-14 Private Domain Name Resolution

Steps:

1. Install and run the IP Server software in a computer with a static IP.
2. Access the network camera through the LAN with a web browser or the client software.
3. Enable DDNS and select IP Server as the protocol type. Refer to *Section 6.1.2 Configuring DDNS Settings* for detailed configuration.

Chapter 3 Access to the Network Camera

3.1 Accessing by Web Browsers

Steps:

1. Open the web browser.
2. In the browser address bar, input the IP address of the network camera, and press the **Enter** key to enter the login interface.
3. Activate the network camera for the first time using, refer to the section 2.1.2 for details.

Note:

- The default IP address is 192.168.1.64.
 - If the camera is not activated, please activate the camera first according to Chapter 3.1 or Chapter 3.2.
4. Select English as the interface language on the top-right of login interface.
 5. Input the user name and password and click **Login**.

The admin user should configure the device accounts and user/operator permissions properly. Delete the unnecessary accounts and user/operator permissions.

Note:

The IP address gets locked if the admin user performs 7 failed password attempts (5 attempts for the user/operator).

Figure 3-1 Login Interface

6. Install the plug-in before viewing the live video and operating the camera. Please follow the installation prompts to install the plug-in.

Figure 3-2 Download and Install Plug-in

Note: Close the web browser to install the plug-in. Please reopen the web browser and log in again after installing the plug-in.

3.2 Accessing by Client Software

The product CD contains the iVMS-4200 client software. You can view the live video and manage the camera with the software.

Follow the installation prompts to install the software. The control panel and live view interface of iVMS-4200 client software are shown as below.

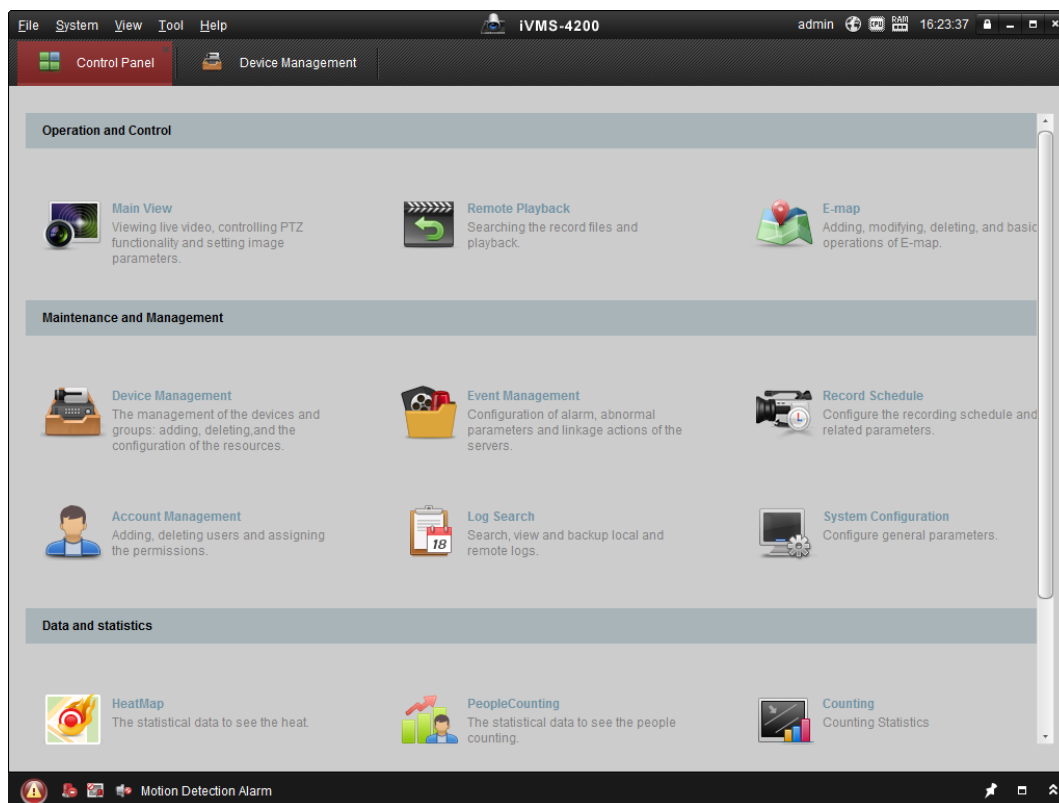

Figure 3-3 iVMS-4200 Control Panel

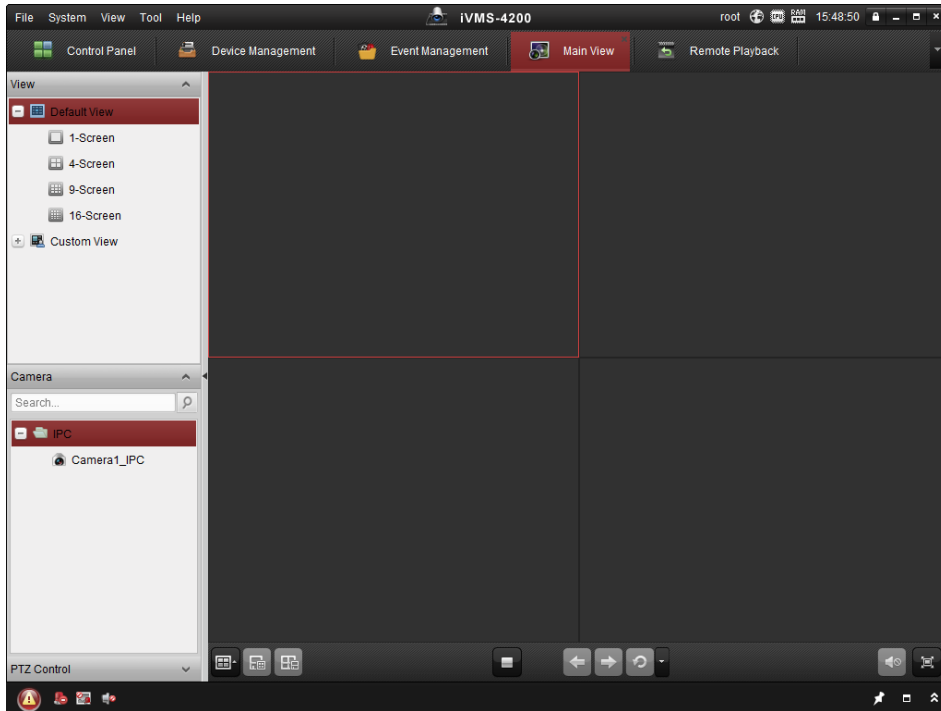

Figure 3-4 iVMS-4200 Main View

Note: For detailed information about the software, please refer to the user manual of the iVMS-4200.

Chapter 4 Live View

4.1 Live View Page

Purpose:

The live view page allows you to view the real-time video, capture images, realize PTZ control, set/call presets and configure video parameters.

Log in the network camera to enter the live view page, or you can click **Live View** on the menu bar of the main page to enter the live view page.

Descriptions of the live view page:

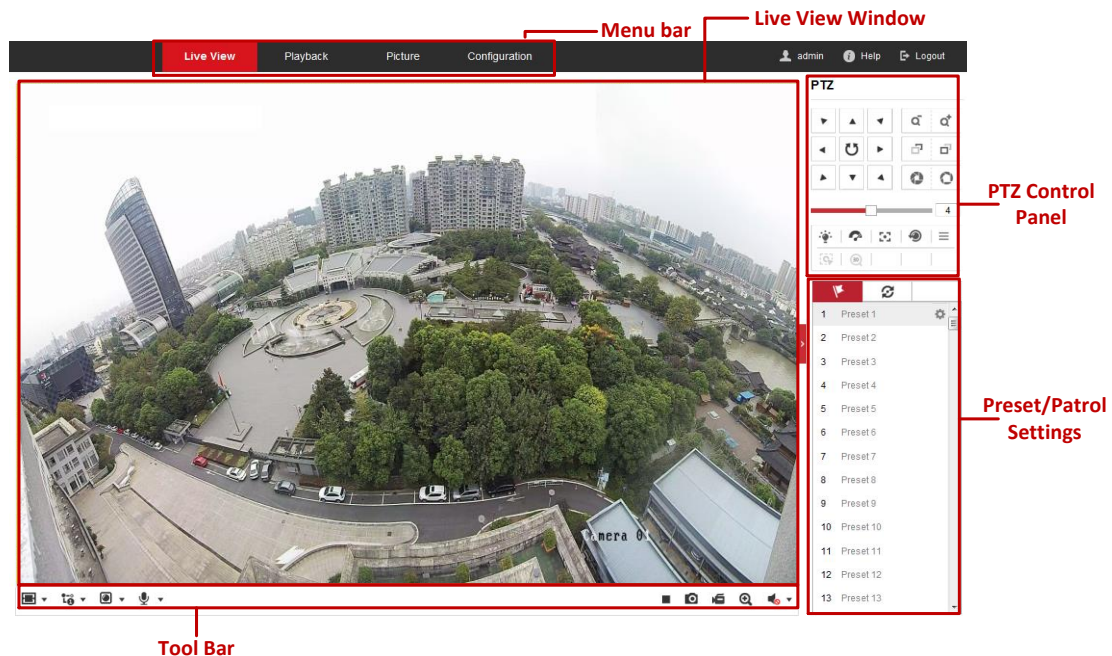

Figure 4-1 Live View Page

Menu Bar:

Click each tab to enter Live View, Playback, Picture, and Configuration page respectively.

Live View Window:

Display the live video.

Toolbar:

Toolbar allows you to adjust the live view window size, the stream type, and the plug-ins. It also allows you to process the operations on the live view page, e.g.,

start/stop live view, capture, record, audio on/off, two-way audio, etc.

For IE (Internet Explorer) users, plug-ins as webcomponents and quick time are selectable. And for Non-IE users, webcomponents, quick time, VLC or MJPEG is selectable if they are supported by the web browser.

PTZ Control:

Perform panning, tilting and zooming actions of the camera. Control the light and the wiper. (only available for cameras supporting PTZ function)

Preset/Patrol Settings:

Set/call/delete the presets or patrols for PTZ cameras.

4.2 Starting Live View

In the live view window as shown in Figure 4-2, click  on the toolbar to start the live view of the camera.

Figure 4-2 Live View Toolbar

Table 4-1 Descriptions of the Toolbar

Icon	Description
	Start/Stop live view.
	The window size is 4:3.
	The window size is 16:9.
	The original widow size.
	Self-adaptive window size.
	Live view with the main stream.
	Live view with the sub stream.
	Click to select the third-party plug-in.
	Manually capture the picture.
	Manually start/stop recording.
	Audio adjustment/mute.
	Turn on/off two-way audio.
	Turn on/off digital zoom function.

Note: The icons vary according to the different camera models.

4.3 Recording and Capturing Pictures Manually

In the live view interface, click  on the toolbar to capture the live pictures or click  to record the live view. The saving paths of the captured pictures and clips can be set on the **Configuration > Local Configuration** page. To configure remote scheduled recording, please refer to *Section 5.1*

Note: The captured image will be saved as JPEG file or BMP file in your computer.

4.4 Operating PTZ Control

Purpose:

In the live view interface, you can use the PTZ control buttons to realize pan/tilt/zoom control of the camera.

Note: To realize PTZ control, the camera connected to the network must support the PTZ function or have a pan/tilt unit installed to the camera. Please properly set the PTZ parameters on RS485 settings page referring to *Section 5.2.4 RS485 Settings*.

4.4.1 PTZ Control Panel

On the live view page, click  next to the right side of the live view window to show the PTZ control panel and click  to hide it.

Click the direction buttons to control the pan/tilt movements.

Figure 4-3 PTZ Control Panel

Click the zoom/focus/iris buttons to realize lens control.

Notes:

- There are eight direction arrows (▲, ▼, ◀, ▶, ↖, ↗, ↘, ↙) in the control panel. Click the arrows to realize adjustment in the relative positions.
- For the cameras which support lens movements only, the direction buttons are invalid.

Table 4-2 Descriptions of PTZ Control Panel

Icon	Description
	Zoom in/out
	Focus near/far
	Iris +/-
	PTZ speed adjustment
	Light on/off
	Wiper on/off
	Auxiliary focus
	Initialize lens
	Adjust speed of pan/tilt movements
	Start Manual Tracking
	Start 3D Zoom

4.4.2 Setting/Calling a Preset

- **Setting a Preset:**

1. In the PTZ control panel, select a preset number from the preset list.

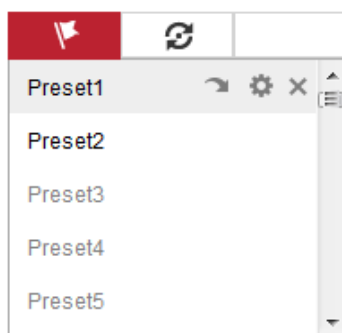

Figure 4-4 Setting a Preset

2. Use the PTZ control buttons to move the lens to the desired position.
 - Pan the camera to the right or left.
 - Tilt the camera up or down.
 - Zoom in or out.
 - Refocus the lens.
3. Click  to finish the setting of the current preset.
4. You can click  to delete the preset.

● **Calling a Preset:**

This feature enables the camera to point to a specified preset scene manually or when an event takes place.

For the defined preset, you can call it at any time to the desired preset scene.

In the PTZ control panel, select a defined preset from the list and click  to call the preset.

Or you can place the mouse on the presets interface, and call the preset by typing the preset No. to call the corresponding presets.

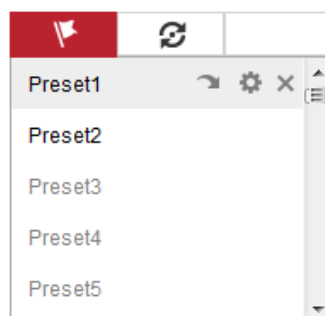

Figure 4-5 Calling a Preset

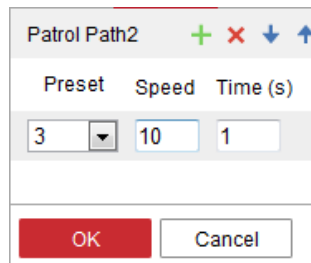

4.4.3 Setting/Calling a Patrol

Note:

No less than 2 presets have to be configured before you set a patrol.

Steps:

1. Click  to enter the patrol configuration interface.
2. Select a path No., and click  to add the configured presets.
3. Select the preset, and input the patrol duration and patrol speed.
4. Click OK to save the first preset.
5. Follow the steps above to add the other presets.

Preset	Speed	Time (s)
3	10	1

Figure 4-6 Add Patrol Path

6. Click **OK** to save a patrol.
7. Click  to start the patrol, and click  to stop it.
8. (Optional) Click  to delete a patrol.

Chapter 5 Network Camera Configuration

5.1 Configuring Local Parameters

Purpose:

The local configuration refers to the parameters of the live view, record files and captured pictures. The record files and captured pictures are the ones you record and capture using the web browser and thus the saving paths of them are on the PC running the browser.

Steps:

1. Enter the Local Configuration interface: **Configuration > Local**.

The screenshot displays the 'Local Configuration' interface, organized into three main sections:

- Live View Parameters:**
 - Protocol: TCP, UDP, MULTICAST, HTTP
 - Play Performance: Shortest Delay, Auto
 - Rules: Enable, Disable
 - Image Format: JPEG, BMP
- Record File Settings:**
 - Record File Size: 256M, 512M, 1G
 - Save record files to:
 - Save downloaded files to:
- Picture and Clip Settings:**
 - Save snapshots in live view to:
 - Save snapshots when playback to:
 - Save clips to:

At the bottom of the interface is a prominent red button with a floppy disk icon and the text 'Save'.

Figure 5-1 Local Configuration Interface

2. Configure the following settings:

- **Live View Parameters:**

- ◆ **Protocol Type:** TCP, UDP, MULTICAST and HTTP are selectable.

TCP: Ensures complete delivery of streaming data and better video quality, yet the real-time transmission will be affected.

UDP: Provides real-time audio and video streams.

HTTP: Allows the same quality as of TCP without setting specific ports for streaming under some network environments.

MULTICAST: It's recommended to select MCAST type when using the Multicast function. For detailed information about Multicast, refer to *Section 6.1.1 Configuring TCP/IP Settings*.

- ◆ **Play Performance:** Set the play performance to Shortest Delay or Auto.
- ◆ **Rules:** It refers to the rules on your local browser, select enable or disable to display or not display the colored marks when the motion detection is triggered. E.g.: If motion detection and rules are both enabled, when a moving object is detected, it will be marked with a green rectangle on the live video.
- ◆ **Image Format:** Choose the image format for picture capture.
- **Record File Settings:** Set the saving path of the recorded video files. Valid for the record files you recorded with the web browser.
 - ◆ **Record File Size:** Select the packed size of the manually recorded and downloaded video files to 256M, 512M or 1G. After the selection, the maximum record file size is the value you selected.
 - ◆ **Save record files to:** Set the saving path for the manually recorded video files.
 - ◆ **Save downloaded files to:** Set the saving path for the downloaded video files in playback mode.
- **Picture and Clip Settings:** Set the saving paths of the captured pictures and clipped video files. Valid for the pictures you capture with the web browser.
 - ◆ **Save snapshots in live view to:** Set the saving path of the manually captured pictures in live view mode.
 - ◆ **Save snapshots when playback to:** Set the saving path of the captured pictures in playback mode.
 - ◆ **Save clips to:** Set the saving path of the clipped video files in playback mode.

Note: You can click **Browse** to change the directory for saving the clips and pictures.

3. Click **Save** to save the settings.

5.2 Configure System Settings

Purpose:

Follow the instructions below to configure the system settings, include System Settings, Maintenance, Security, and User Management, etc.

5.2.1 Viewing Basic Information

Enter the Basic Information interface:

Configuration > System > System Settings > Basic Information

In the **Basic Information** interface, you can edit the Device Name or Device No..

Other information of the network camera, such as Model, Serial No., Firmware Version, Encoding Version, Number of Channels, Number of HDDs, Number of Alarm Input and Number of Alarm Output are displayed. The information cannot be changed in this menu. It is the reference for maintenance or modification in future.

Device Name	IP CAMERA
Device No.	88
Model	XX-XXXXXXXX-XX
Serial No.	XX-XXXXXXXX-XXXXXXXXXXXXXXXXXXXXXXXXXX
Firmware Version	Vx.x.x build xxxxxx
Encoding Version	Vx.x build xxxxxxxx
Web Version	Vx.x.x build xxxxxx
Plugin Version	Vx.x.x.xx
Number of Channels	4
Number of HDDs	0
Number of Alarm Input	1
Number of Alarm Output	1

Figure 5-2 Device Information

5.2.2 Time and DST Settings

Purpose:

You can follow the instructions in this section to configure the time synchronization and DST settings.

● Time Settings

Steps:

1. Enter the Time Settings interface:

Configuration > System > System Settings > Time Settings

Time Zone (GMT+08:00) Beijing, Urumqi, Singapore

NTP

NTP

Server Address time.windows.com

NTP Port 123

Interval 1440 min

Test

Manual Time Sync.

Manual Time Sync.

Device Time 2015-10-08T10:12:23

Set Time 2015-10-08T10:10:57 Sync. with computer time

Save

Figure 5-3 Time Settings

2. Select the Time Zone of your location from the drop-down list.
 - Synchronizing Time by NTP Server.
 - (1) Check the **NTP** item to enable the NTP function.
 - (2) Configure the following settings:
 - Server Address:** IP address of NTP server.
 - NTP Port:** Port of NTP server.
 - Interval:** The time interval between the two synchronizing actions with NTP server.

(3) (Optional) You can click the **Test** button to test the time synchronization function via NTP server.

Figure 5-4 Time Sync by NTP Server

Note: If the camera is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the camera is set in a customized network, NTP software can be used to establish a NTP server for time synchronization.

- Synchronizing Time Manually

(1) Check the **Manual Time Sync** item to enable the manual time synchronization function.

(2) Click the icon  to open the calendar page.

(3) Click on the calendar to select the date, set the time, and click **OK** to save.

Figure 5-5 Time Sync Manually

(4)(Optional) You can check **Sync. with computer time** item to synchronize the time of the device with that of the local PC.

3. Click **Save** to save the settings.

● DST

Purpose:

For region using the summer time, DST (daylight saving time) settings can be configured according to the actual needs.

Steps:

1. Enter DST Settings interface:

Configuration > System > System Settings > DST

2. Check the checkbox of **Enable DST** to enable daylight saving time.

3. Set the start time and end time for the DST period.

4. Select the DST bias from the drop-down list.

5. Click **Save** to save the settings.

<input checked="" type="checkbox"/> Enable DST	
Start Time	Apr ▼ First ▼ Sun ▼ 02 ▼
End Time	Oct ▼ Last ▼ Sun ▼ 02 ▼
DST Bias	30min ▼

Figure 5-6 DST Settings

5.2.3 RS232 Settings

The RS232 port can be used in two ways:

- **Parameters Configuration:** Connect a computer to the camera through the serial port. Device parameters can be configured by using software such as HyperTerminal. The serial port parameters must be the same as the serial port parameters of the camera.
- **Transparent Channel:** Connect a serial device directly to the camera. The serial device will be controlled remotely by the computer through the network.

Steps:

1. Enter RS-232 Port Setting interface:

Configuration > System > System Settings > RS232

2. Configure the Baud Rate, Data Bit, Stop Bit, Parity, Flow Control, and Usage.

Basic Information	Time Settings	RS232	RS485	DST	Fisheye Parameters
Baud Rate		115200			
Data Bit		8			
Stop Bit		1			
Parity		None			
Flow Ctrl		None			
Usage		Console			

 Save

Figure 5-7 RS-232 Settings

Note: If you want to connect the camera by the RS-232 port, the parameters of the RS-232 should be exactly the same with the parameters you configured here.

3. Click **Save** to save the settings.

5.2.4 RS-485 Settings

Purpose:

The RS-485 serial port is used to control the PTZ of the camera. The configuring of the PTZ parameters should be done before you control the PTZ unit.

Note: RS-485 settings vary according to the camera model.

Steps:

1. Enter RS-485 Port Setting interface:

Configuration > System > System Settings > RS485

2. Set the RS-485 parameters.

By default, the Baud Rate is set as 9600 bps, the Data Bit is 8, the stop bit is 1 and the Parity and Flow Control are None.

3. Click **Save** to save the settings.

Note: The Baud Rate, PTZ Protocol and PTZ Address parameters should be exactly the same as the PTZ camera parameters.

RS485	
Baud Rate	9600
Data Bit	8
Stop Bit	1
Parity	None
Flow Ctrl	None
PTZ Protocol	PELCO-D
PTZ Address	0

Save

Figure 5-8 RS-485 Settings

5.2.5 Panoramic Parameters

Purpose:

This camera is equipped with multi-sensors. You can view the images coming from every sensor separately. Or you can view a stitched panoramic live view image by the live view images coming from all the sensors.

Steps:

1. Enter the Panoramic Parameters setting interface:

Configuration > System > System Settings > Panoramic Parameters

2. Select the desired image mode according to your actual need. Original Image and Panoramic Image are selectable.

Basic Information Time Settings DST RS232 RS485 **Panoramic Parameters**

Image Mode: Panorama Image
Original Image
Panorama Image

Save

Figure 5-9 Panoramic Parameters Setting

Original Image: Live view images from four sensors will be shown separately.

Panoramic Image: Live view images from four sensors will be stitched together and shown on one screen.

3. Click Save to save the setting.

Note: Reboot the camera to take effect of the new settings.

5.2.6 Image Stitching Adjustment

Purpose:

When you select the image mode as panoramic image, Image Stitching Adjustment is available. With this function, you can adjust the view of each sensor to form a well-stitched image.

Steps:

1. Enter Image Stitching Adjustment interface:

Configuration > System > System Settings > Image Stitching Adjustment

Figure 5-10 Image Stitching Adjustment Interface

2. Click **Start Adjusting**.
3. Select a sensor from the drop-down list to adjust. There are four sensors selectable.

- Click the four arrow buttons to adjust the view of the selected sensor.

Figure 5-11 Adjustment Control Area

- (Optional) You can click  to initialize the view.
- Click **Stop Adjusting** to finish adjusting. The adjustment will be saved automatically.

5.3 Maintenance

5.3.1 Upgrade & Maintenance

Purpose:

The upgrade and maintenance interface allows you to process the operations, including reboot, partly restore, restore to default, export/import the configuration files, and upgrade the device.

Enter the Maintenance interface:

Configuration > System > Maintenance > Upgrade & Maintenance

The screenshot shows a web interface for 'Upgrade & Maintenance'. It is divided into several sections:

- Reboot:** A button labeled 'Reboot' with the description 'Reboot the device.'
- Default:** Two buttons: 'Restore' (description: 'Reset all the parameters, except the IP parameters and user information, to the default settings.') and 'Default' (description: 'Restore all parameters to default settings.').
- Export:** A button labeled 'Device Parameters'.
- Import Config. File:** A section with a text input field labeled 'Device Parameters', a 'Browse' button, and an 'Import' button. Below it is a 'Status' label.
- Upgrade:** A section with a dropdown menu set to 'Firmware', a text input field, a 'Browse' button, and an 'Upgrade' button. Below it is a 'Status' label.

Note: The upgrading process will be 1 to 10 minutes, please don't disconnect power to the device during the process. The device reboots automatically after upgrading.

Figure 5-12 Upgrade and Maintenance

- **Rebooting the Camera**

Click **Reboot** to reboot the network camera.

- **Restoring Default Settings**

Click **Restore** or **Default** to restore the default settings.

Note: After restoring the default settings, the IP address is also restored to the default IP address, please be careful for this action.

- **Exporting/Importing Configuration File**

Purpose:

Configuration file is used for the batch configuration of the camera, which can simplify the configuration steps when there are a lot of cameras needing configuring.

Steps:

1. Click **Export** to export the current configuration file, and save it to the certain place.
2. Click **Browse** to select the saved configuration file and then click **Import** to

start importing configuration file.

Note: You need to reboot the camera after importing configuration file.

● **Upgrading the System**

Click **Browse** to select the local upgrade file and then click **Upgrade** to start remote upgrade.

Note: The upgrading process will take 1 to 10 minutes. Please don't disconnect power of the camera during the process. The camera reboots automatically after upgrading.

5.3.2 Log

Purpose:

The operation, alarm, exception and information of the camera can be stored in log files. You can also export the log files on your demand.

Before you start:

Please configure network storage for the camera or insert a memory card in the camera.

Steps:

1. Enter log searching interface: **Configuration > System > Maintenance > Log.**

The screenshot shows the 'Log' section of the 'System Service' menu. It includes search filters for Major Type (Exception), Minor Type (All Types), Start Time (2015-09-25 00:00:00), and End Time (2014-09-30 23:59:59). Below the filters is a table titled 'Log List' with columns for No., Time, Major Type, Minor Type, Channel No., Local/Remote User, and Remote Host IP. An 'Export' button is located at the top right of the table.

No.	Time	Major Type	Minor Type	Channel No.	Local/Remote User	Remote Host IP

Figure 5-13 Log Searching Interface

2. Set the log search conditions to specify the search, including the Major Type, Minor Type, Start Time and End Time.
3. Click **Search** to search log files. The matched log files will be displayed on the log list interface.

Start Time End Time

Log List							<input type="button" value="Export"/>
No.	Time	Major Type	Minor Type	Channel No.	Local/Remote User	Remote Host IP	
1	2015-05-25 19:12:34	Operation	Remote: Get Working Sta...		admin	10.16.1.107

Total 614 Items << < 1/7 > >>

Figure 5-14 Log Searching

- To export the log files, click **Export** to save the log files.

5.4 Security Settings

Configure the parameters, including Authentication, Anonymous Visit, IP Address Filter, and Security Service from security interface.

5.4.1 Authentication

Purpose:

You can specifically secure the stream data of live view.

Steps:

- Enter the Authentication interface: **Configuration > System > Security > Authentication.**
- Select the RTSP **Authentication** type **basic** or **disable** in the drop-down list to enable or disable the RTSP authentication.

Figure 5-15 RTSP Authentication

Note: If you disable the RTSP authentication, anyone can access the video stream by the RTSP protocol via the IP address.

3. Click **Save** to save the settings.

5.4.2 IP Address Filter

Purpose:

This function makes it possible for access control.

Steps:

1. Enter the IP Address Filter interface: **Configuration > System > Security > IP Address Filter**

Figure 5-16 IP Address Filter Interface

2. Check the checkbox of **Enable IP Address Filter**.
3. Select the type of IP Address Filter in the drop-down list, **Forbidden** and **Allowed** are selectable.
4. Set the IP Address Filter list.
 - Add an IP Address

Steps:

- (1) Click the **Add** to add an IP.
- (2) Input the IP Address.

Figure 5-17 Add an IP

- (3) Click the **OK** to finish adding.

- Modify an IP Address

Steps:

- (1) Left-click an IP address from filter list and click **Modify**.
- (2) Modify the IP address in the text filed.

Figure 5-18 Modify an IP

- (3) Click the **OK** to finish modifying.

- Delete an IP Address or IP Addresses.

Select the IP address(es) and click **Delete**.

5. Click **Save** to save the settings.

5.4.3 Security Service

To enable the remote login, and improve the data communication security, the camera provides the security service for better user experience.

Steps:

1. Enter the security service configuration interface: **Configuration** > **System** > **Security** > **Security Service**.

Figure 5-19 Security Service

2. Check the checkbox of **Enable SSH** to enable the data communication security, and uncheck the checkbox to disable the SSH.
3. Check the checkbox of **Enable Illegal Login Lock**, and then the access from that IP address is locked after 7 failed user name/password attempts of an admin account and 5 failed attempts of an operator or user.

Note: If the IP address is locked, you can try to login the device again after 30 minutes.

5.5 User Management

Enter the User Management interface:

Configuration > System > Security > User Management

Figure 5-20 User Management Interface

- **Adding a User**

The *admin* user has all permissions by default and can create / modify / delete other accounts.

The *admin* user cannot be deleted and you can only change the *admin* password.

Steps:

1. Click **Add** to add a user.

2. Input the **User Name**, select **Level** and input **Password**.

Figure 5-21 Add a User

Notes:

- Up to 31 user accounts can be created.
- Users of different levels own different permissions. Operator and user are selectable.

! STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

3. Set the permissions for the new user.
4. Click **OK** to finish the user addition.

- **Modifying a User**

Steps:

1. Click the user from the user list and Click **Modify**.
2. Modify the **User Name**, **Level** or **Password**.

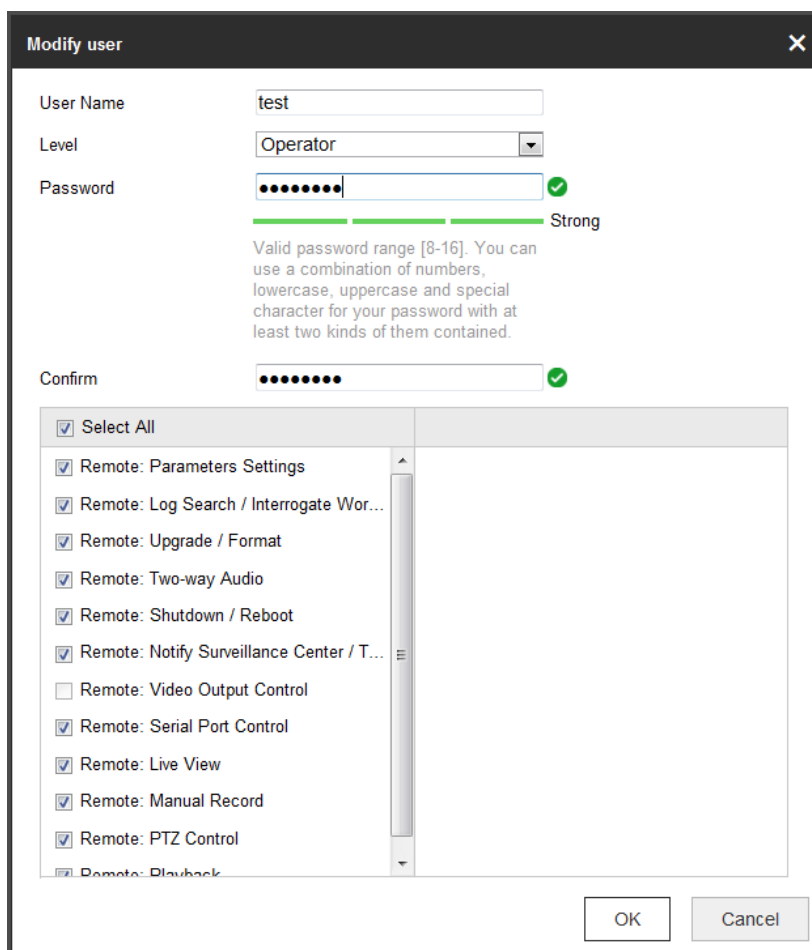

Figure 5-22 Modify a User

STRONG PASSWORD RECOMMENDED—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

3. Set the permissions for the user.
4. Click **OK** to finish the user modification.

- **Deleting a User**

Steps:

1. Click to select the user you want to delete and click **Delete**.
2. Click **OK** on the pop-up dialogue box to confirm the deletion.

Chapter 6 Network Settings

Purpose:

Follow the instructions in this chapter to configure the basic settings and advanced settings.

6.1 Configuring Basic Settings

Purpose:

You can configure the parameters, including TCP/IP, DDNS, PPPoE, Port, and NAT, etc., by following the instructions in this section.

6.1.1 Configuring TCP/IP Settings

Purpose:

TCP/IP settings must be properly configured before you operate the camera over network. The camera supports both the IPv4 and IPv6. Both versions can be configured simultaneously without conflicting to each other, and at least one IP version should be configured.

Steps:

1. Enter TCP/IP Settings interface:

Configuration > Network > Basic Settings > TCP/IP

TCP/IP DDNS PPPoE Port NAT

NIC Type ▾

DHCP

IPv4 Address

IPv4 Subnet Mask

IPv4 Default Gateway

IPv6 Mode ▾

IPv6 Address

IPv6 Subnet Mask

IPv6 Default Gateway

Mac Address

MTU

Multicast Address

Enable Multicast Discovery

DNS Server

Preferred DNS Server

Alternate DNS Server

Figure 6-1 TCP/IP Settings

2. Configure the basic network settings, including the NIC Type, IPv4 or IPv6 Address, IPv4 or IPv6 Subnet Mask, IPv4 or IPv6 Default Gateway, MTU settings and Multicast Address.
3. (Optional) Check the checkbox of **Enable Multicast Discovery**, and then the online network camera can be automatically detected by client software via private multicast protocol in the LAN.
4. Configure the DNS server. Input the preferred DNS server, and alternate DNS server.
5. Click **Save** to save the above settings.

Notes:

- The valid value range of MTU is 1280 to 1500.
- The Multicast sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Before utilizing this function, you have to enable the

Multicast function of your router.

- A reboot is required for the settings to take effect.

6.1.2 Configuring DDNS Settings

Purpose:

If your camera is set to use PPPoE as its default network connection, you can use the Dynamic DNS (DDNS) for network access.

Before you start:

Registration on the DDNS server is required before configuring the DDNS settings of the camera.

Steps:

1. Enter the DDNS Settings interface: **Configuration > Network > Basic Settings > DDNS**.
2. Check the **Enable DDNS** checkbox to enable this feature.
3. Select **DDNS Type**. Four DDNS types are selectable: HiDDNS, IPServer, DynDNS and NO-IP.

- DynDNS:

Steps:

- (1)Enter **Server Address** of DynDNS (e.g. members.dyndns.org).
- (2)In the **Domain** text field, enter the domain name obtained from the DynDNS website.
- (3)Enter the **User Name** and **Password** registered on the DynDNS website.
- (4)Click **Save** to save the settings.

TCP/IP **DDNS** PPPoE Port NAT

Enable DDNS

DDNS Type: DynDNS

Server Address: members.dyndns.org ✓

Domain: 123.dyndns.com ✓

User Name: test ✓

Port: 0

Password: ●●●●●● ✓

Confirm: ●●●●●● ✓

 Save

Figure 6-2 DynDNS Settings

- IP Server:

Steps:

(1) Enter the Server Address of the IP Server.

(2) Click **Save** to save the settings.

Note: For the IP Server, you have to apply a static IP, subnet mask, gateway and preferred DNS from the ISP. The **Server Address** should be entered with the static IP address of the computer that runs the IP Server software.

TCP/IP **DDNS** PPPoE Port NAT

Enable DDNS

DDNS Type: IPServer

Server Address: 212.15.10.121 ✓

Domain:

User Name:

Port: 0

Password:

Confirm:

 Save

Figure 6-3 IP Server Settings

Note: For the US and Canada area, you can enter 173.200.91.74 as the server address.

- NO-IP:

Steps:

(1) Choose the DDNS Type as NO-IP.

TCP/IP **DDNS** PPPoE Port NAT

Enable DDNS

DDNS Type: NO-IP

Server Address: www.noip.com ✓

Domain:

User Name:

Port: 0

Password:

Confirm:

Save

Figure 6-4 NO-IP DNS Settings

(2) Enter the Server Address as www.noip.com

(3) Enter the Domain name you registered.

(4) Enter the User Name and Password.

(5) Click **Save** and then you can view the camera with the domain name.

- HiDDNS

Steps:

(1) Choose the DDNS Type as HiDDNS.

Enable DDNS

DDNS Type: HiDDNS

Server Address: www.hik-online.com

Domain:

User Name:

Port: 0

Password:

Confirm:

Figure 6-5 HiDDNS Settings

(2) Enter the Server Address *www.hik-online.com*.

(3) Enter the Domain name of the camera. The domain is the same with the device alias in the HiDDNS server.

(4) Click **Save** to save the new settings.

Note: A reboot is required for the settings to take effect.

6.1.3 Configuring PPPoE Settings

Steps:

1. Enter the PPPoE Settings interface: **Configuration > Network > Basic Settings > PPPoE**

The screenshot shows the PPPoE configuration page. At the top, there are navigation tabs: TCP/IP, DDNS, PPPoE (highlighted in red), Port, and NAT. Below the tabs, there is a checkbox labeled 'Enable PPPoE' which is checked. Underneath, there are four input fields: 'Dynamic IP' with the value '0.0.0.0', 'User Name', 'Password', and 'Confirm'. At the bottom center, there is a red button with a floppy disk icon and the text 'Save'.

Figure 6-6 PPPoE Settings

2. Check the **Enable PPPoE** checkbox to enable this feature.
3. Enter **User Name**, **Password**, and **Confirm** password for PPPoE access.

Note: The User Name and Password should be assigned by your ISP.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
 - *Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.*
4. Click **Save** to save and exit the interface.

Note: A reboot is required for the settings to take effect.

6.1.4 Configuring Port Settings

Purpose:

You can set the port No. of the camera, e.g., HTTP port, RTSP port and HTTPS port.

Steps:

1. Enter the Port Settings interface, **Configuration > Network > Basic Settings >**

Port

TCP/IP	DDNS	PPPoE	Port	NAT
			HTTP Port	<input type="text" value="80"/>
			RTSP Port	<input type="text" value="554"/>
			HTTPS Port	<input type="text" value="443"/>
			Server Port	<input type="text" value="8000"/>

 Save

Figure 6-7 Port Settings

2. Set the HTTP port, RTSP port, HTTPS port and server port of the camera.

HTTP Port: The default port number is 80, and it can be changed to any port No. which is not occupied.

RTSP Port: The default port number is 554 and it can be changed to any port No. ranges from 1 to 65535.

HTTPS Port: The default port number is 443, and it can be changed to any port No. which is not occupied.

Server Port: The default server port number is 8000, and it can be changed to any port No. ranges from 2000 to 65535.

3. Click **Save** to save the settings.

Note: A reboot is required for the settings to take effect.

6.1.5 Configure NAT (Network Address Translation) Settings

Purpose:

NAT interface allows you to configure the UPnP™ parameters.

Universal Plug and Play (UPnP™) is a networking architecture that provides compatibility among networking equipment, software and other hardware devices. The UPnP protocol allows devices to connect seamlessly and to simplify the implementation of networks in the home and corporate environments.

With the function enabled, you don't need to configure the port mapping for each port, and the camera is connected to the Wide Area Network via the router.

Steps:

1. Enter the NAT settings interface. **Configuration > Network > Basic Settings > NAT.**
2. Check the checkbox to enable the UPnP™ function.
3. Choose a nickname for the camera, or you can use the default name.
4. Select the port mapping mode. Manual and Auto are selectable. And for manual port mapping, you can customize the value of the external port.
5. Click **Save** to save the settings.

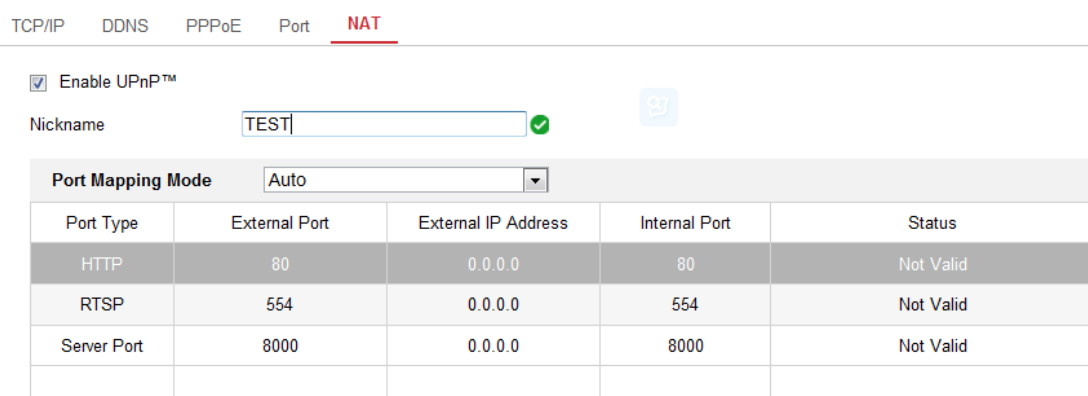

Figure 6-8 UPnP Settings

6.2 Configure Advanced Settings

Purpose:

You can configure the parameters, including SNMP, FTP, Email, HTTPS, QoS, 802.1x, etc., by following the instructions in this section.

6.2.1 Configuring SNMP Settings

Purpose:

You can set the SNMP function to get camera status, parameters and alarm related information, and manage the camera remotely when it is connected to the network.

Before you start:

Before setting the SNMP, please download the SNMP software and manage to receive the camera information via SNMP port. By setting the Trap Address, the camera can send the alarm event and exception messages to the surveillance center.

Note: The SNMP version you select should be the same as that of the SNMP software. And you also need to use the different version according to the security level you required. SNMP v1 provides no security and SNMP v2 requires password for access. And SNMP v3 provides encryption and if you use the third version, HTTPS protocol must be enabled.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
- *Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.*

2. Check the checkbox of Enable SNMPv1, Enable SNMP v2c, or Enable SNMPv3 to enable the feature correspondingly.
3. Configure the SNMP settings.

Note: The settings of the SNMP software should be the same as the settings you configure here.

4. Click **Save** to save and finish the settings.

Note: A reboot is required for the settings to take effect.

6.2.2 Configuring FTP Settings

Purpose:

You can configure the FTP server related information to enable the uploading of the captured pictures to the FTP server. The captured pictures can be triggered by events or a timing snapshot task.

Steps:

1. Enter the FTP Settings interface: **Configuration > Network > Advanced Settings > FTP.**

The screenshot displays the FTP configuration page. At the top, there are navigation tabs: SNMP, FTP (highlighted in red), Email, HTTPS, QoS, and 802.1x. Below the tabs, the configuration fields are as follows:

- Server Address:** Input field containing "0.0.0.0".
- Port:** Input field containing "21".
- User Name:** Input field containing "admin". To its right is an unchecked checkbox labeled "Anonymous".
- Password:** Input field with 8 black dots for masking.
- Confirm:** Input field with 8 black dots for masking.
- Directory Structure:** A dropdown menu currently showing "Save in the root directory".
- Upload Picture:** A checked checkbox.
- Test:** A button located below the "Upload Picture" checkbox.

At the bottom of the configuration area, there is a prominent red button with a white floppy disk icon and the text "Save".

Figure 6-10 FTP Settings

2. Configure the FTP settings; and the user name and password are required for the FTP server login.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
- *Proper configuration of all passwords and other security settings is the*

responsibility of the installer and/or end-user.

Directory: In the **Directory Structure** field, you can select the root directory, parent directory and child directory. When the parent directory is selected, you have the option to use the Device Name, Device Number or Device IP for the name of the directory; and when the Child Directory is selected, you can use the Camera Name or Camera No. as the name of the directory.

Upload Picture: To enable uploading the captured picture to the FTP server.

Anonymous Access to the FTP Server (in which case the user name and password won't be required.): Check the **Anonymous** checkbox to enable the anonymous access to the FTP server.

Note: The anonymous access function must be supported by the FTP server.

3. (Optional) You can click the **Test** button to test the settings.
4. Click **Save** to save the settings.

Note: If you want to upload the captured pictures to FTP server, you have to enable the continuous snapshot or event-triggered snapshot on **Capture** setting page. For detailed information, please refer to the *Section 10.2*.

6.2.3 Configuring Email Settings

Purpose:

The system can be configured to send an Email notification to all designated receivers if an alarm event is detected, e.g., motion detection event, video loss, video tampering, etc.

Before you start:

Please configure the DNS Server settings under **Configuration > Network > Basic Settings > TCP/IP** before using the Email function.

Steps:

1. Enter the TCP/IP Settings (**Configuration > Network > Basic Settings > TCP/IP**) to set the IPv4 Address, IPv4 Subnet Mask, IPv4 Default Gateway and the Preferred DNS Server.

Note: Please refer to *Section 6.1.1 Configuring TCP/IP Settings* for detailed information.

2. Enter the Email Settings interface: **Configuration > Network >Advanced Settings > Email.**

The screenshot shows the 'Email' settings page with the following fields:

- Sender: test ✓
- Sender's Address: test@gmail.com ✓
- SMTP Server: (empty)
- SMTP Port: 25
- E-mail Encryption: None
- Attached Image
- Interval: 2 s
- Authentication
- User Name: (empty)
- Password: (empty)
- Confirm: (empty)

Below the settings is a table titled 'Receiver':

No.	Receiver	Receiver's Address	Test
1			Test
2			
3			

Figure 6-11 Email Settings

3. Configure the following settings:

Sender: The name of the email sender.

Sender's Address: The email address of the sender.

SMTP Server: IP address or host name (e.g., smtp.263xmail.com) of the SMTP Server.

SMTP Port: The SMTP port. The default TCP/IP port for SMTP is 25 (not secured). And the SSL SMTP port is 465.

Email Encryption: None and SSL are selectable. Select SSL if it is required by the SMTP server.

Attached Image: Check the checkbox of Attached Image if you want to send emails with attached alarm images.

Interval: The interval refers to the time between two actions of sending attached

pictures.

Authentication (optional): If your email server requires authentication, check this checkbox to use authentication to log in to this server and input the login user name and password.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
- *Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.*

The **Receiver** table: Select the receiver to which the email is sent. Up to 3 receivers can be configured.

Receiver: The name of the user to be notified.

Receiver's Address: The email address of user to be notified.

4. Click **Save** to save the settings.

6.2.4 Configuring HTTPS Settings

Purpose:

HTTPS provides authentication of the web site and its associated web server, which protects against Man-in-the-middle attacks. Perform the following steps to set the port number of https.

E.g., if you set the port number as 443 and the IP address is 192.168.1.64, you may access the device by inputting https://192.168.1.64:443 via the web browser.

Steps:

1. Enter the HTTPS settings interface. **Configuration > Network > Advanced Settings > HTTPS.**

2. Check the checkbox of **Enable** to enable the function.

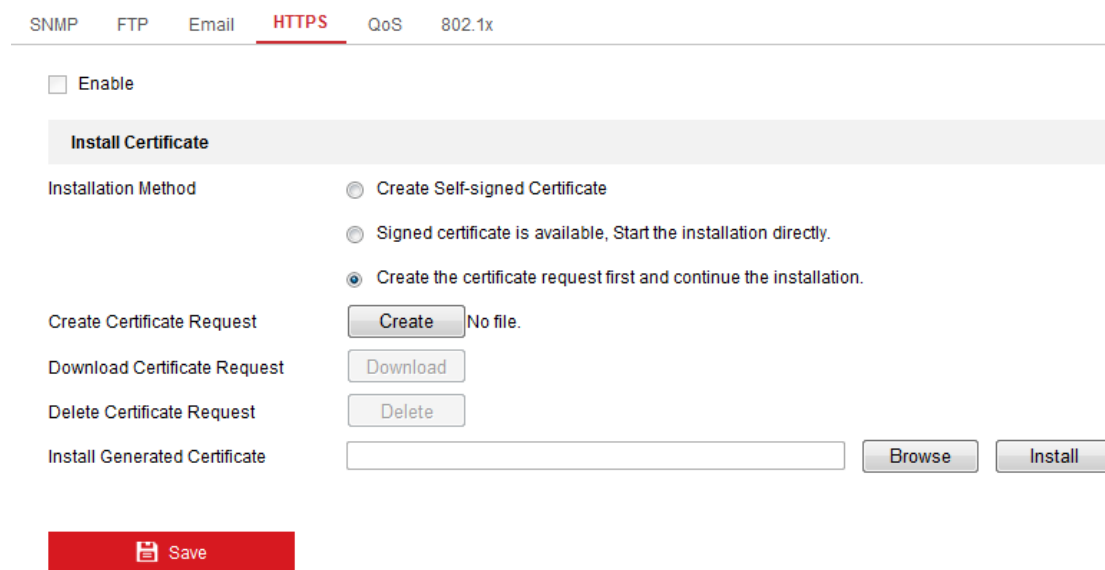

Figure 6-12 HTTPS Configuration Interface

3. Install a certificate. There are three ways of installation available, choose one according to your actual need.

- Create the self-signed certificate
 - (1) Select **Create Self-signed Certificate** as the installation method.
 - (2) Click **Create** button to enter the creation interface.

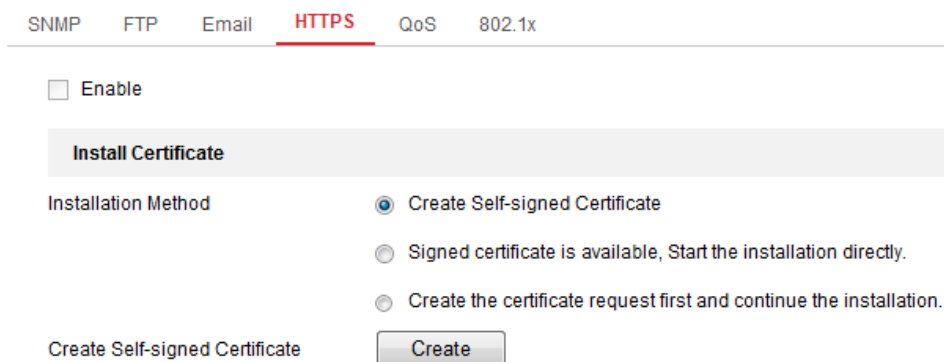

Figure 6-13 Create Self-signed Certificate

- (3) Enter the country, host name/IP, validity and other information.
- (4) Click **OK** to save the settings.

Note: If you already had a certificate installed, the Create Self-signed Certificate is grayed out.

- Signed certificate is available, start the installation directly.
If you already have a signed certificate, select this installation method, and

start installation according to pop-up installation guides.

- Create the authorized certificate

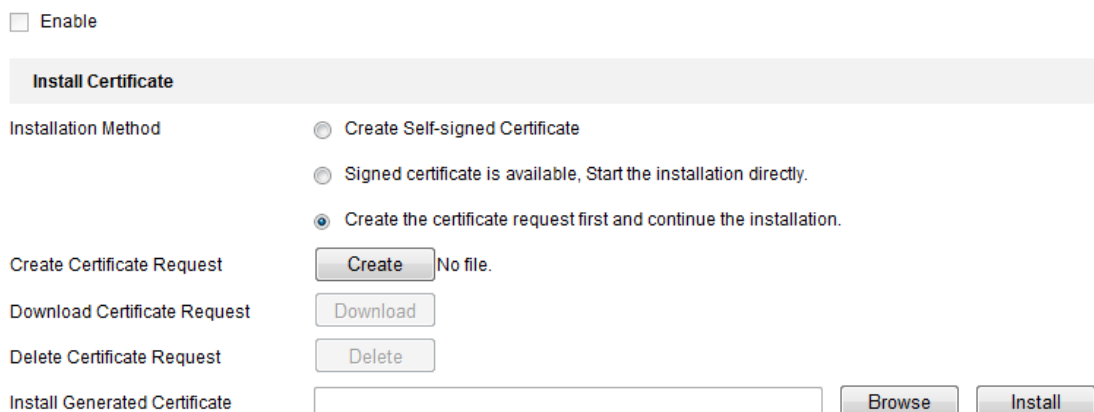

Figure 6-14 Create the Certificate Request and Continue Installation

- (1) Select **Create the certificate request first and continue the installation** as the installation method.
 - (2) Click **Create** button to create the certificate request. Fill in the required information in the pop-up window.
 - (3) Download the certificate request and submit it to the trusted certificate authority for signature.
 - (4) After receiving the signed valid certificate, import the certificate to the device.
4. There will be the certificate information after your successfully creating and installing the certificate.

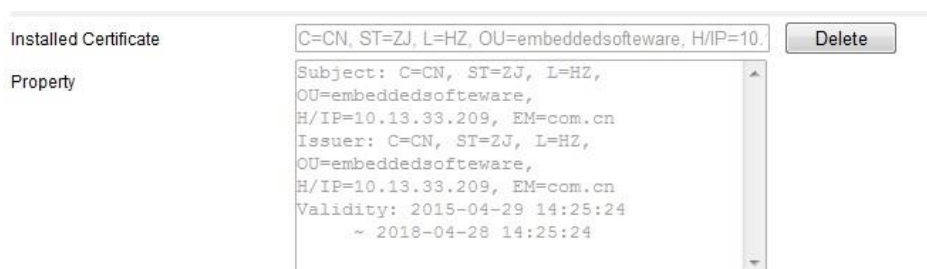

Figure 6-15 Installed Certificate

5. Click the **Save** button to save the settings.

Before you start:

The authentication server must be configured. Please apply and register a user name and password for 802.1X in the server.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
- *Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.*

Steps:

1. Enter the 802.1X Settings interface, **Configuration > Network > Advanced Settings > 802.1X**

Figure 6-17 802.1X Settings

2. Check the **Enable IEEE 802.1X** checkbox to enable the feature.
3. Configure the 802.1X settings, including Protocol, EAPOL version, User Name, Password and Confirm.

Note: The **EAPOL version** must be identical with that of the router or the switch.

4. Enter the user name and password to access the server.
5. Click **Save** to finish the settings.

Note: A reboot is required for the settings to take effect.

Chapter 7 Video/Audio Settings

Purpose:

Follow the instructions below to configure the video setting, audio settings, ROI, and Display info. on Stream.

7.1 Configuring Video Settings

Steps:

1. Enter the Video Settings interface, **Configuration > Video/Audio > Video**

The screenshot shows the 'Video' settings page with the following parameters:

Parameter	Value	Unit
Stream Type	Main Stream(Normal)	
Video Type	Video Stream	
Resolution	4096*1800	
Bitrate Type	Variable	
Video Quality	Medium	
Frame Rate	25	fps
Max. Bitrate	16384	Kbps
Video Encoding	H.264	
Profile	High Profile	
I Frame Interval	50	
SVC	OFF	
Smoothing	50	[Clear<->Smooth]

At the bottom of the form is a red 'Save' button.

Figure 7-1 Video Settings

2. Select the Stream Type of the camera to main stream or sub-stream.
The main stream is usually for recording and live viewing with good bandwidth, and the sub stream can be used for live viewing when the bandwidth is limited.
3. You can customize the following parameters for the selected main stream or sub-stream:

Video Type:

Select the stream type to video stream, or video & audio composite stream. The

audio signal will be recorded only when the **Video Type** is **Video & Audio**.

Resolution:

Select the resolution of the video output.

Bitrate Type:

Select the bitrate type to constant or variable.

Video Quality:

When bitrate type is selected as Variable, 6 levels of video quality are selectable.

Frame Rate:

Set the frame rate. The frame rate is to describe the frequency at which the video stream is updated and it is measured by frames per second (fps). A higher frame rate is advantageous when there is movement in the video stream, as it maintains image quality throughout.

Max. Bitrate:

Set the max. bitrate from 256 to 16384 Kbps. The higher value corresponds to the higher video quality, but the better bandwidth is required.

Note: The maximum limit of the max. bitrate value varies according to different camera platforms. For certain cameras, the maximum limit is 8192 Kbps or 12288 Kbps.

Video Encoding:

If the **Stream Type** is set to main stream, H.264 is selectable, and if the stream type is set to sub stream, H.264 and MJPEG are selectable.

Note: The supported video encoding may differ according to the different platform.

Profile:

When you set the stream type as main stream, main profile, basic profile, and high profile are selectable; and set the stream type as sub stream, then basic profile and main profile are selectable.

I Frame Interval:

Set I Frame Interval from 1 to 400.

SVC:

Scalable Video Coding is an extension of the H.264/AVC standard. Select OFF/ON to disable/enable the SVC function. Select Auto and the device will automatically extract frames from the original video when the network bandwidth is insufficient.

Smoothing:

It refers to the smoothness of the stream. The higher value of the smoothing is, the better fluency of the stream is, though, the video quality may not be so satisfactory. The lower value of the smoothing is, the higher quality of the stream is, though it may appear not fluent.

4. (Optional) Click **Copy to** to copy the parameters of the set camera channel to other channels.
5. Click **Save** to save the settings.

Note:

The video parameters vary according to different camera models. Refer to the actual display page for camera functions.

7.2 Configuring Audio Settings

Steps:

1. Enter the Audio Settings interface: **Configuration > Video/Audio > Audio**.

Video	Audio	ROI
Audio Encoding	G.711ulaw	
Audio Input	MicIn	
Input Volume	50	
Environmental Noise Filter	OFF	

Save

Figure 7-2 Audio Settings

2. Configure the following settings.

Audio Encoding: G.722.1, G.711 ulaw, G.711alaw, G.726, MP2L2 and PCM are selectable. For MP2L2, the Sampling Rate and Audio Stream Bitrate are

configurable. For PCM, the Sampling Rate can be set.

Audio Input: MicIn and LineIn are selectable for the connected microphone and pickup respectively.

Input Volume: 0 to 100.

Environmental Noise Filter: Set it as OFF or ON. When the function is enabled, the noise in the environment can be filtered to some extent.

3. Click **Save** to save the settings.

Note: Audio settings vary according to different camera models.

7.3 Configuring ROI Encoding

Purpose:

ROI (Region of Interest) encoding helps to discriminate the ROI and background information in video compression, which means, the technology assigns more encoding resource to the region of interest, thus to increase the quality of the ROI whereas the background information is less focused.

Note: ROI function varies according to different camera models.

Steps:

1. Enter the ROI settings interface
Configuration > Video/Audio > ROI
2. Select a camera channel to configure from the Channel No. drop-down list.
3. Select the stream type for this channel. Main stream and sub stream are selectable.
4. Set fixed regions for ROI.
 - (1) Select the Region No. from the drop-down list.
 - (2) Click **Drawing**. Click and drag the mouse on the view screen to draw a red rectangle as the ROI region. You can click **Clear** to cancel former drawing. Click **Stop Drawing** when you finish.
 - (3) Check the **Enable** checkbox to enable ROI function for the chosen region.
 - (4) Select the ROI level.

- (5) Enter a region name for the chosen region.
- (6) Click **Save** to save the settings of ROI settings for chosen fixed region.
- (7) Repeat steps 1) to 6) to setup other fixed regions.

Figure 7-3 Region of Interest Settings

5. Click **Save** to save the settings.

7.4 Display Info. on Stream

Check the checkbox of **Enable Dual-VCA**, and the information of the objects (e.g. human, vehicle, etc.) will be marked in the video stream. Then, you can set rules on

the connected rear-end device to detect the events including line crossing, intrusion, etc.

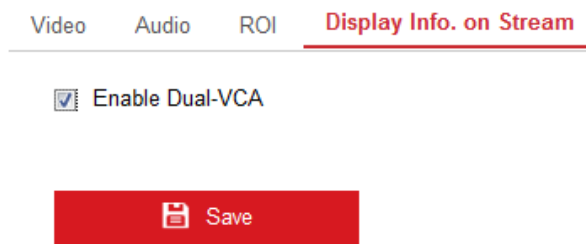

Figure 7-4 Display Info. on Stream

Chapter 8 Image Settings

Purpose:

Follow the instructions in this chapter to configure the image parameters, including display settings, OSD settings, privacy mask, and picture overlay.

8.1 Configuring Display Settings

Purpose:

Configure the image adjustment, exposure settings, day/night switch, backlight settings, white balance, image enhancement, video adjustment, and other parameters in display settings.

Note: The display parameters vary according to the different camera models. Please refer to the actual interface for details.

8.1.1 Day/Night Auto-Switch

Steps:

1. Enter the Display Settings interface, **Configuration > Image > Display Settings**.

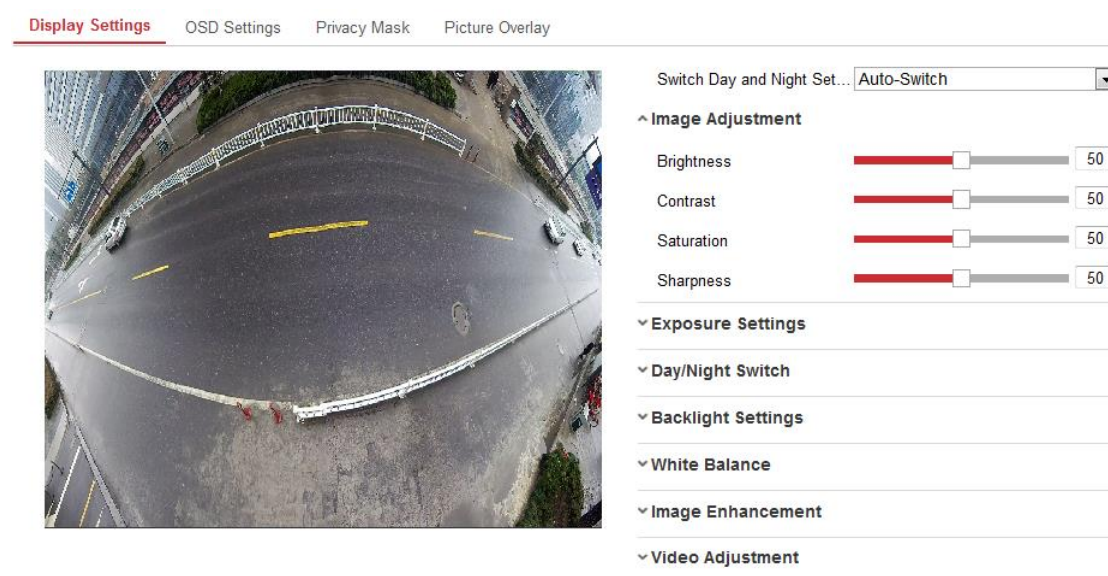

Figure 8-1 Display Settings of Day/Night Auto-Switch

2. Set the image parameters of the camera.

Note: In order to guarantee the image quality in different illumination, it provides

two sets of parameters for users to configure.

- **Image Adjustment**

Brightness describes bright of the image, which ranges from 1 to 100, and the default value is 50.

Contrast describes the contrast of the image, which ranges from 1 to 100, and the default value is 50.

Saturation describes the colorfulness of the image color, which ranges from 1 to 100, and the default value is 50.

Sharpness describes the edge contrast of the image, which ranges from 1 to 100, and the default value is 50.

- **Exposure Settings**

If the camera is equipped with the fixed lens, only **Manual** is selectable, and the iris mode is not configurable.

If **Auto** is selected, you can set the auto iris level from 0 to 100.

The **Exposure Time** refers to the electronic shutter time, which ranges from 1 to 1/100,000s. Adjust it according to the actual luminance condition.

Gain: Gain of the image can also be manually configured from 0 to 100. The bigger the value is, the brighter would the image be, and the noise would also be amplified to a larger extent.

- **Day/Night Switch**

Select the Day/Night Switch mode according to different surveillance demand.

Figure 8-2 Day/Night Switch

Day, Night, Auto, Scheduled-Switch, and Triggered by alarm input are selectable for day/night switch.

Day: the camera stays at day mode.

Night: the camera stays at night mode.

Auto: the camera switches between the day mode and the night mode according to the illumination automatically. The sensitivity ranges from 0 to 7, the higher the value is, the easier the mode switches. The filtering time refers to the interval time between the day/night switch. You can set it from 5s to 120s.

Scheduled-Switch: Set the start time and the end time to define the duration for day/night mode.

Triggered by alarm input: The switch is triggered by alarm input. You can set the triggered mode to day or night.

- **Backlight Settings**

BLC Area: If you focus on an object against strong backlight, the object will be too dark to be seen clearly. BLC compensates light to the object in the front to make it clear. OFF, Up, Down, Left, Right, Center and Customize are selectable.

Note: If BLC mode is set as Custom, you can draw a red rectangle on the live view image as the BLC area.

WDR: Wide Dynamic Range can be used when there is a high contrast of the bright area and the dark area of the scene.

HLC: High Light Compression function can be used when there are strong lights in the scene affecting the image quality.

- **White Balance**

White balance is the white rendition function of the camera used to adjust the color temperature according to the environment.

Figure 8-3 White Balance

- **Image Enhancement**

Digital Noise Reduction: DNR reduces the noise in the video stream. OFF, Normal and Expert are selectable. Set the DNR level from 0 to 100, and the default value is 50 in Normal Mode. Set the DNR level from both space DNR level [0-100] and time DNR level [0-100] in Expert Mode.

Defog Mode: You can enable the defog function when the environment is foggy and the image is misty. It enhances the subtle details so that the image appears clearer.

Grey Scale: You can choose the range of the grey scale as [0-255] or [16-235].

- **Video Adjustment**

Mirror: It mirrors the image so you can see it inversed. Left/Right, Up/Down, Center, and OFF are selectable.

Scene Mode: Choose the scene as indoor or outdoor according to the real environment.

Video Standard: 50 Hz and 60 Hz are selectable. Choose according to the different video standards; normally 50 Hz for PAL standard and 60 Hz for NTSC standard.

Capture Mode: It's the selectable video input mode to meet the different demands of field of view and resolution.

8.1.2 Day/Night Scheduled-Switch

Day/Night scheduled-switch configuration interface enables you to set the camera parameters for day and night separately, guaranteeing the image quality in different illumination.

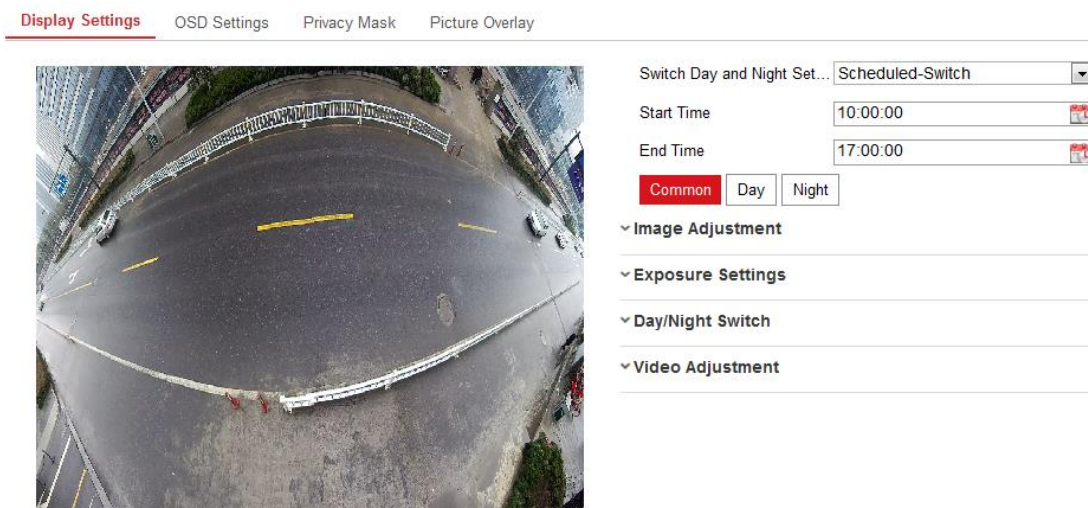

Figure 8-4 Day/Night Scheduled-Switch Configuration Interface

Steps:

1. Click the calendar icon to select the start time and the end time of the switch.
2. Click **Common** tab to configure the common parameters applicable to the day mode and night mode.

Note: For the detailed information of each parameter, please refer to *Section 8.1.1 Day/Night Auto-Switch*.

3. Click **Day** tab to configure the parameters applicable for day mode.
4. Click **Night** tab to configure the parameters applicable for night mode.

Note: The settings saved automatically if any parameter is changed.

8.2 Configuring OSD Settings

Purpose:

You can customize the camera name, time/date format, display mode, and OSD size displayed on the live view.

Steps:

1. Enter the OSD Settings interface: **Configuration > Image > OSD Settings**.

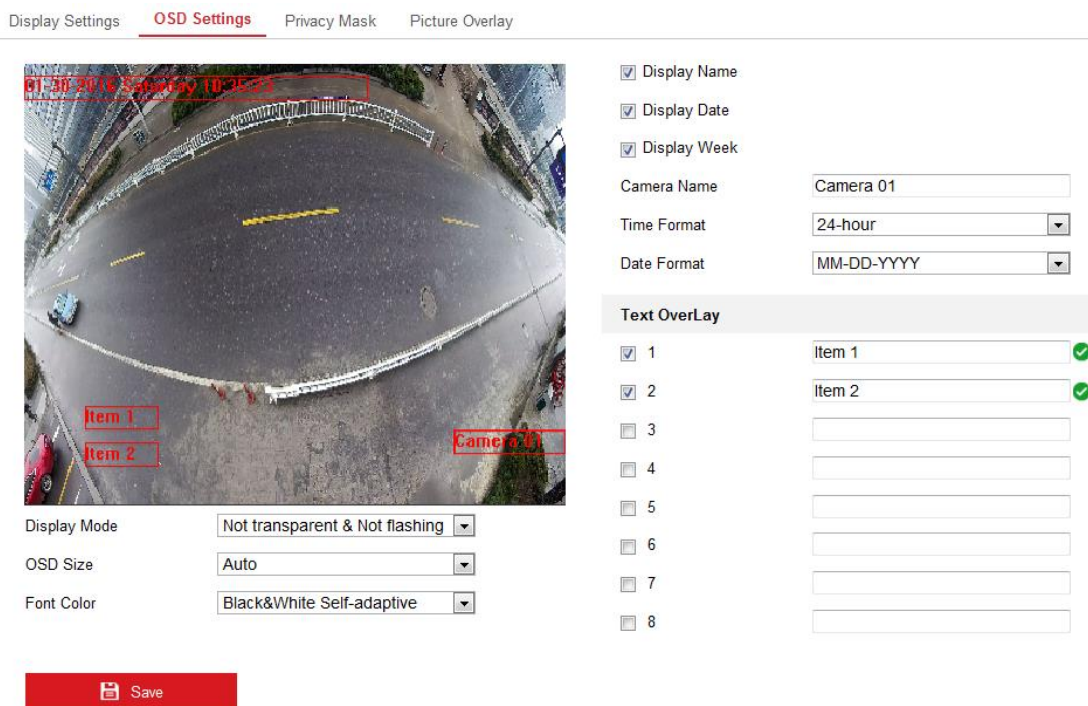

Figure 8-5 OSD Settings

2. Check the corresponding checkbox to select the display of camera name, date or week if required.
 3. Edit the camera name in the text field of **Camera Name**.
 4. Select from the drop-down list to set the time format and date format.
 5. You can use the mouse to click and drag the text frame in the live view window to adjust the OSD position.
 6. Configure the text overlay settings.
 - (1) Check the checkbox in front of the textbox to enable the on-screen display.
 - (2) Input the characters in the textbox.
 - (3) (Optional) Use the mouse to click and drag the red text frame in the live view window to adjust the text overlay position.
- Note:** Up to 8 text overlays are configurable.
7. Click **Save** to save the settings.

8.3 Configuring Privacy Mask

Purpose:

Privacy mask enables you to cover certain areas on the live video to prevent certain spots in the surveillance area from being live viewed and recorded.

Steps:

1. Enter the Privacy Mask Settings interface: **Configuration** > **Image** > **Privacy Mask**.
2. Check the checkbox of **Enable Privacy Mask** to enable this function.
3. Click **Draw Area**.

Figure 8-6 Privacy Mask Settings

4. Click and drag the mouse in the live video window to draw the mask area.
Note: You are allowed to draw up to 4 areas on the same image.
5. Click **Stop Drawing** to finish drawing or click **Clear All** to clear all of the areas you set without saving them.

6. Click **Save** to save the settings.

8.4 Configuring Picture Overlay

Purpose:

Picture overlay enables you to overlay a picture on the image. This function enables a certain enterprise or users to overlay their logo on the image.

Steps:

1. Enter the Picture Overlay Settings interface, **Configuration > Image > Picture Overlay**.

Figure 8-7 Picture Overlay

2. Click **Browse** to select a picture.
3. Click **Upload** to upload it.
4. Check **Enable Picture Overlay** checkbox to enable the function.
5. Set X Coordinate and Y Coordinate values adjust the picture position on the image. Adjust Picture Width and Picture Height to the desired size.
6. Click **Save** to save settings.

Note: The picture must be in RGB24 bmp format and the maximum size of the picture is 128*128.

Chapter 9 Event Settings

9.1 Basic Events

You can configure the basic events by following the instructions in this section, including motion detection, video tampering, alarm input, alarm output, and exception, etc. These events can trigger the linkage methods, such as Notify Surveillance Center, Send Email, Trigger Alarm Output, etc.

Note: Check the checkbox of Notify Surveillance Center if you want the alarm information to be pushed to PC or mobile client software as soon as the alarm is triggered.

9.1.1 Configuring Motion Detection

Purpose:

Motion detection detects the moving objects in the configured surveillance area, and a series of actions can be taken when the alarm is triggered.

In order to detect the moving objects accurately and reduce the false alarm rate, normal configuration and expert configuration are selectable for different motion detection environment.

● Normal Configuration

Normal configuration adopts the same set of motion detection parameters in the daytime and at night.

Tasks 1: Set the Motion Detection Area

Steps:

1. Enter the motion detection settings interface: **Configuration > Event > Basic Event > Motion Detection**.
2. Check the checkbox of **Enable Motion Detection**.
3. Check the checkbox of **Enable Dynamic Analysis for Motion** if you want to mark the detected objects with green rectangles.

Note: Select Disable for rules if you don't want the detected objected displayed with the green rectangles. Select disable rules from **Configuration > Local > Live View Parameters-rules**.

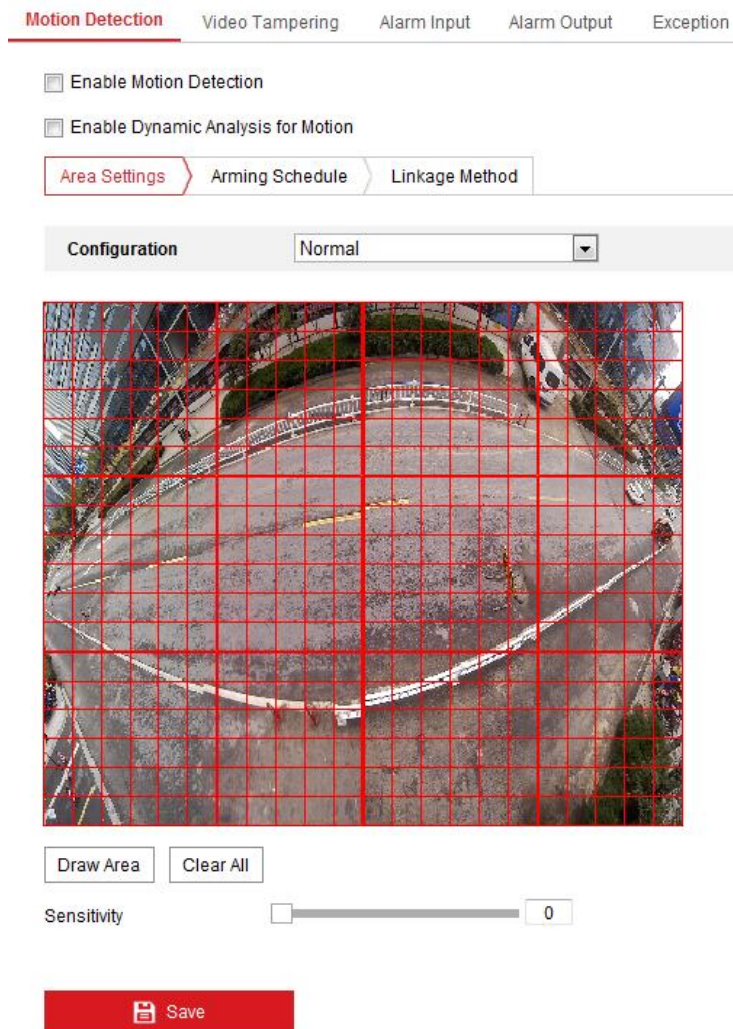

Figure 9-1 Enable Motion Detection

4. Click **Draw Area**. Click and drag the mouse on the live video to draw a motion detection area. Click **Stop Drawing** to finish drawing one area.
5. (Optional) Click **Clear All** to clear all of the areas.
6. (Optional) Move the slider to set the sensitivity of the detection.

Task 2: Set the Arming Schedule for Motion Detection

Steps:

1. Click **Arming Schedule** to edit the arming schedule.
2. Click on the time bar and drag the mouse to select the time period.

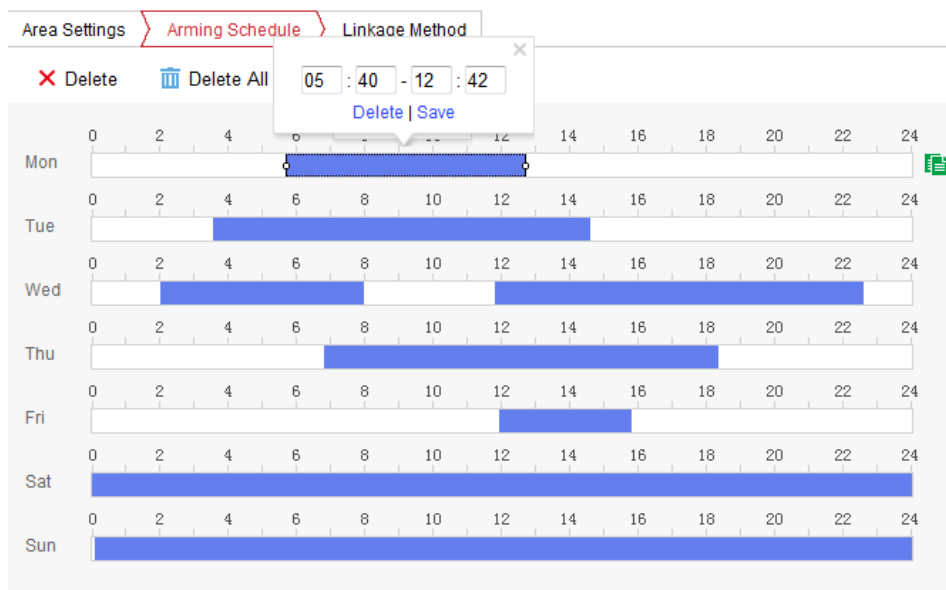

Figure 9-2 Arming Schedule

Note: Click on the selected time period, you can adjust the time period to the desired time by either moving the time bar or input the exact time period.

3. (Optional) Click **Delete** to delete the current arming schedule, or click **Save** to save the settings.
4. Move the mouse to the end of each day, a copy dialogue box pops up, and you can copy the current settings to other days.
5. Click **Save** to save the settings.

Note: The time of each period can't be overlapped. Up to 8 periods can be configured for each day.

Task 3: Set the Linkage Method for Motion Detection

Check the checkbox to select the linkage method. Audible Warning, Send Email, Notify Surveillance Center, Upload to FTP, Trigger Channel and Trigger Alarm Output are selectable. You can specify the linkage method when an event occurs.

Figure 9-3 Linkage Method

Note: The linkage methods vary according to the different camera models.

- **Audible Warning**

Trigger the audible warning locally. And it only supported by the device that have the audio output.

- **Notify Surveillance Center**

Send an exception or alarm signal to remote management software when an event occurs.

- **Send Email**

Send an email with alarm information to a user or users when an event occurs.

Note: To send the Email when an event occurs, please refer to *Section 6.2.3* to complete Email setup in advance.

- **Upload to FTP**

Capture the image when an alarm is triggered and upload the picture to a FTP server.

Notes:

- Set the FTP address and the remote FTP server first. Refer to *Section 6.2.2 Configuring FTP Settings* for detailed information.

- Go to **Configuration > Storage > Schedule Settings > Capture Parameters** page, enable the event-triggered snapshot, and set the capture interval and capture number.

- The captured image can also be uploaded to the available SD card or network disk.

- **Trigger Channel**

The video will be recorded when the motion is detected. You have to set the recording schedule to realize this function. Please refer to *Section 10.1* for detailed information.

- **Trigger Alarm Output**

Trigger one or more external alarm outputs when an event occurs.

Note: To trigger an alarm output when an event occurs, please refer to *Section 9.1.4 Configuring Alarm Output* to set the related parameters.

● Expert Configuration

Expert mode is mainly used to configure the sensitivity and proportion of object on each area for different day/night switch.

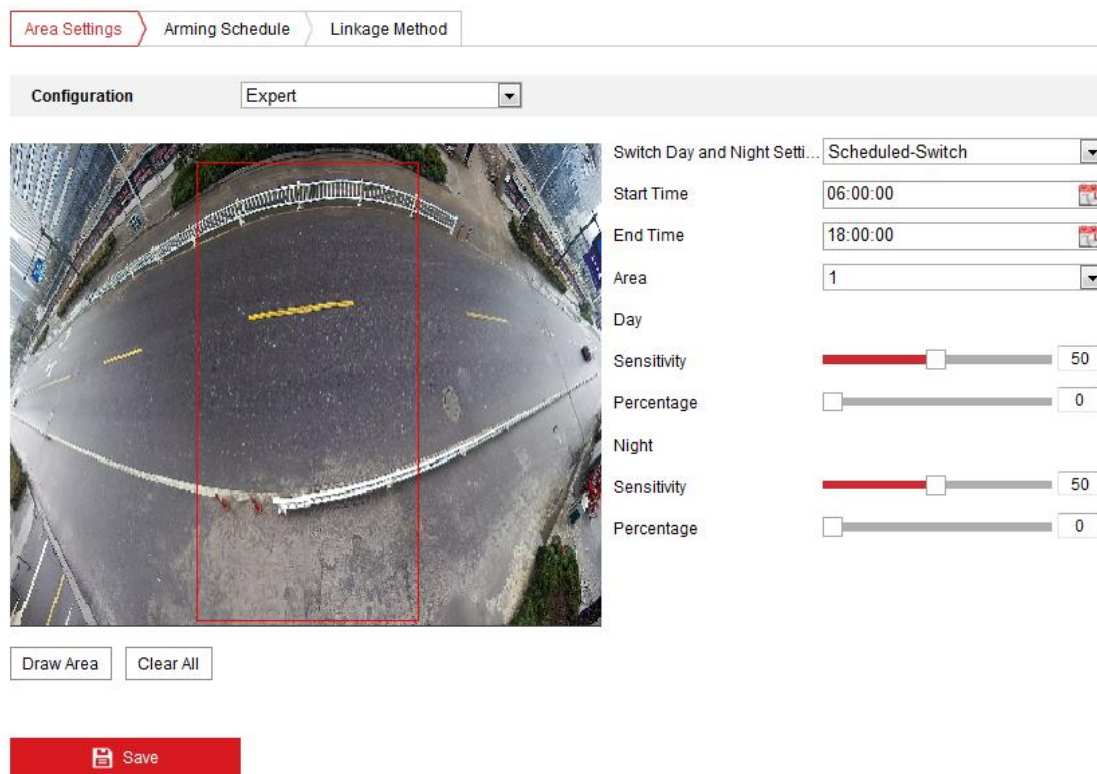

Figure 9-4 Expert Mode of Motion Detection

● Day/Night Switch OFF

Steps:

1. Draw the detection area as in the normal configuration mode. Up to 8 areas are supported.
2. Select **OFF** for **Switch Day and Night Settings**.
3. Select the area by clicking the area No..
4. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area.
5. Set the arming schedule and linkage method as in the normal configuration mode.
6. Click **Save** to save the settings.

● Day/Night Auto-Switch

Steps:

1. Draw the detection area as in the normal configuration mode. Up to 8 areas are

supported.

2. Select **Auto-Switch** for **Switch Day and Night Settings**.
 3. Select the area by clicking the area No.
 4. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area in the daytime.
 5. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area at night.
 6. Set the arming schedule and linkage method as in the normal configuration mode.
 7. Click **Save** to save the settings.
- Day/Night Scheduled-Switch

Steps:

1. Draw the detection area as in the normal configuration mode. Up to 8 areas are supported.
2. Select **Scheduled-Switch** for **Switch Day and Night Settings**.

Figure 9-5 Day/Night Scheduled-Switch

3. Select the start time and the end time for the switch timing.
4. Select the area by clicking the area No..
5. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area in the daytime.
6. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area at night.
7. Set the arming schedule and linkage method as in the normal configuration mode.
8. Click **Save** to save the settings.

9.1.2 Configuring Video Tampering Alarm

Purpose:

You can configure the camera to trigger the alarm when the lens is covered and take certain alarm response actions.

Steps:

1. Enter the video tampering Settings interface, **Configuration > Event > Basic Event > Video Tampering**.

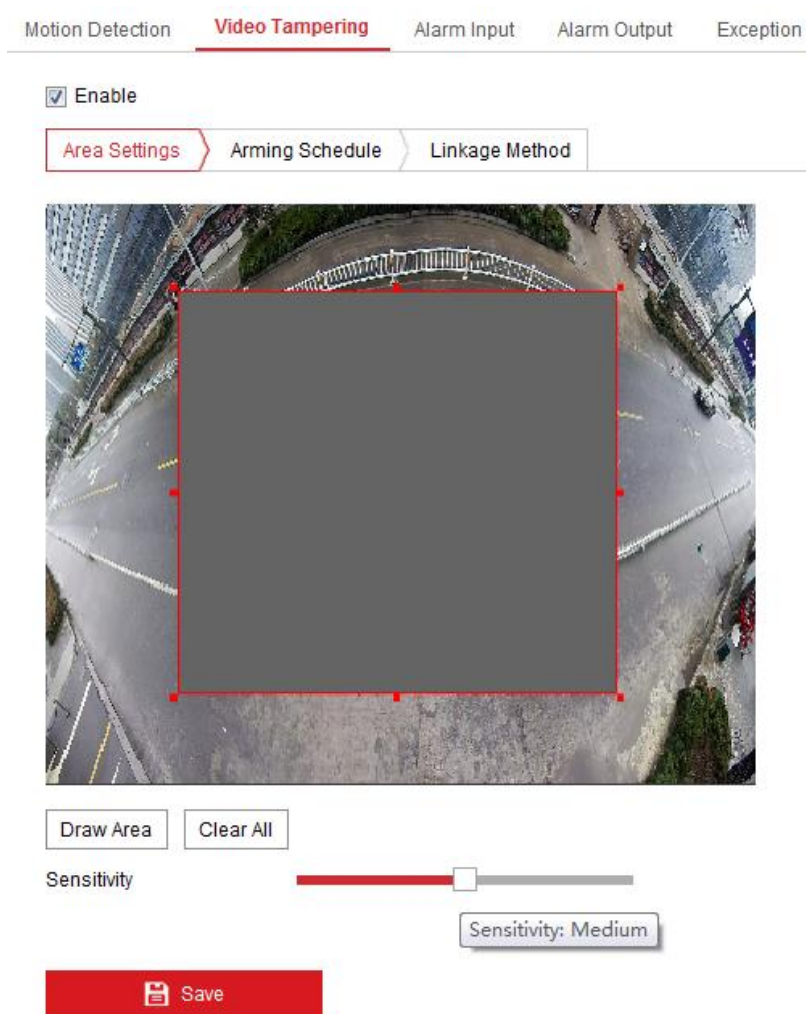

Figure 9-6 Video Tampering Alarm

2. Check **Enable Video Tampering** checkbox to enable the video tampering detection.
3. Set the video tampering area. Refer to *Task 1: Set the Motion Detection Area* in *Section 9.1.1*.

4. Click **Arming Schedule** tab to edit the arming schedule for video tampering. The arming schedule configuration is the same as the setting of the arming schedule for motion detection. Refer to *Task 2: Set the Arming Schedule for Motion Detection* in Section 9.1.1.
5. Check the checkbox to select the linkage method taken for the video tampering. Audible warning, notify surveillance center, send email and trigger alarm output are selectable. Please refer to *Task 3: Set the Linkage Method for Motion Detection* in Section 9.1.1.
6. Click **Save** to save the settings.

9.1.3 Configuring Alarm Input

Steps:

Motion Detection Video Tampering **Alarm Input** Alarm Output Exception

Alarm Input No. IP Address

Alarm Type Alarm Name

Enable Alarm Input Handling

Arming Schedule Linkage Method

	0	2	4	6	8	10	12	14	16	18	20	22	24
Mon	[Blue bar]												
Tue	[Blue bar]												
Wed	[Blue bar]												
Thu	[Blue bar]												
Fri	[Blue bar]												
Sat	[Blue bar]												
Sun	[Blue bar]												

Figure 9-7 Alarm Input Settings

1. Enter the Alarm Input Settings interface: **Configuration > Event > Basic Event > Alarm Input.**

2. Choose the alarm input No. and the Alarm Type. The alarm type can be NO (Normally Open) and NC (Normally Closed). Edit the name to set a name for the alarm input (optional).
3. Click **Arming Schedule** to set the arming schedule for the alarm input. Refer to *Task 2: Set the Arming Schedule for Motion Detection* in Section 9.1.1.
4. Click **Linkage Method** and check the checkbox to select the linkage method taken for the alarm input. Refer to *Task 3: Set the Linkage Method for Motion Detection* in Section 9.1.1.
5. You can click **Copy** to copy your settings to other alarm inputs.
6. Click **Save** to save the settings.

9.1.4 Configuring Alarm Output

Steps:

1. Enter the Alarm Output Settings interface: **Configuration> Event > Basic Event > Alarm Output**.
2. Select one alarm output channel in the **Alarm Output** drop-down list. You can also set a name for the alarm output (optional).
3. The Delay time can be set to 5sec, 10sec, 30sec, 1min, 2min, 5min, 10min or Manual. The delay time refers to the time duration that the alarm output remains in effect after alarm occurs.
4. Click **Arming Schedule** to enter the Edit Schedule Time interface. The time schedule configuration is the same as the settings of the arming schedule for motion detection Refer to *Task 2: Set the Arming Schedule for Motion Detection* in Section 9.1.1.
5. You can copy the settings to other alarm outputs.
6. Click **Save** to save the settings.

9.1.5 Handling Exception

The exception type can be HDD full, HDD error, network disconnected, IP address conflicted and illegal login to the cameras.

Steps:

1. Enter the Exception Settings interface: **Configuration > Event > Basic Event > Exception.**
2. Check the checkbox to set the actions taken for the Exception alarm. Refer to **Task 3: Set the Linkage Method for Motion Detection** in Section 9.1.1.

Chapter 10 Storage Settings

Before you start:

To configure record settings, please make sure that you have the network storage device or local storage device configured.

10.1 Configuring Record Schedule

Purpose:

There are two kinds of recording for the cameras: manual recording and scheduled recording. In this section, you can follow the instructions to configure the scheduled recording. By default, the record files of scheduled recording are stored in the local storage or in the network disk.

Steps:

1. Enter the Record Schedule Settings interface: **Configuration** > **Storage** > **Schedule Settings** > **Record Schedule**.

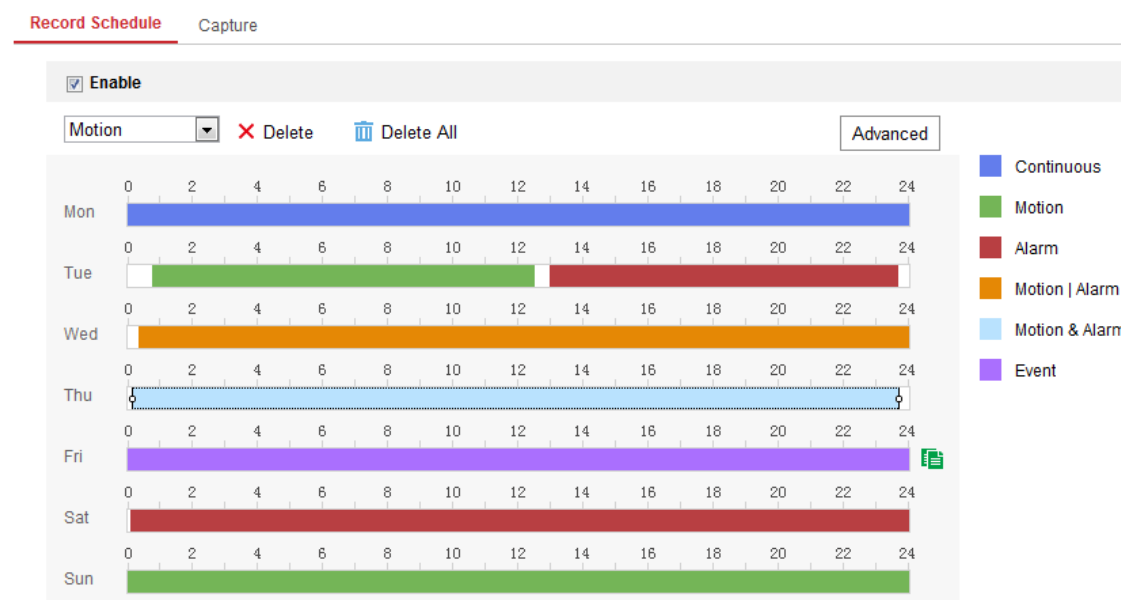

Figure 10-1 Recording Schedule Interface

2. Check the checkbox of **Enable** to enable scheduled recording.
3. Click **Advanced** to set the camera record parameters.

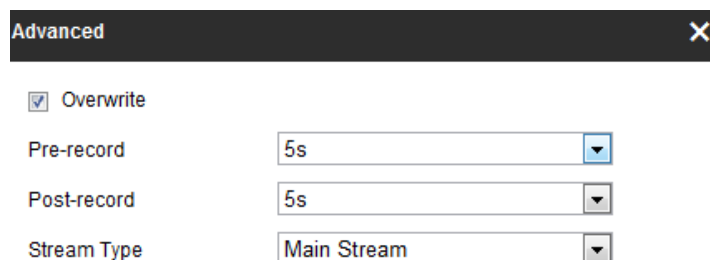

Figure 10-2 Record Parameters

- **Pre-record:** The time you set to start recording before the scheduled time or the event. For example, if an alarm triggers recording at 10:00, and the pre-record time is set as 5 seconds, the camera starts to record at 9:59:55.
The Pre-record time can be configured as No Pre-record, 5s, 10s, 15s, 20s, 25s, 30s or not limited.
- **Post-record:** The time you set to stop recording after the scheduled time or the event. For example, if an alarm triggered recording ends at 11:00, and the post-record time is set as 5 seconds, the camera records until 11:00:05.
The Post-record time can be configured as 5s, 10s, 30s, 1 min, 2 min, 5 min or 10 min.
- **Stream Type:** Select the stream type for recording.

Note: The record parameter configurations vary depending on the camera model.

4. Select a **Record Type**. The record type can be Continuous, Motion Detection, Alarm, Motion | Alarm, Motion & Alarm, and Event.

- **Continuous**

If you select **Continuous**, the video will be recorded automatically according to the time of the schedule.

- **Record Triggered by Motion Detection**

If you select **Motion Detection**, the video will be recorded when the motion is detected.

Besides configuring the recording schedule, you have to set the motion detection area and check the checkbox of Trigger Channel in the Linkage Method of Motion Detection Settings interface. For detailed information, please refer to the **Task 1: Set the Motion Detection Area** in the *Section 9.1.1*.

- **Record Triggered by Alarm**

If you select **Alarm**, the video will be recorded when the alarm is triggered via the external alarm input channels.

Besides configuring the recording schedule, you have to set the **Alarm Type** and check the checkbox of **Trigger Channel** in the **Linkage Method** of **Alarm Input Settings** interface. For detailed information, please refer to *Section 9.1.3*.

- **Record Triggered by Motion & Alarm**

If you select **Motion & Alarm**, the video will be recorded when the motion and alarm are triggered at the same time.

Besides configuring the recording schedule, you have to configure the settings on the **Motion Detection** and **Alarm Input Settings** interfaces. Please refer to *Section 9.1.1* and *Section 9.1.3* for detailed information.

- **Record Triggered by Motion | Alarm**

If you select **Motion | Alarm**, the video will be recorded when the external alarm is triggered or the motion is detected.

Besides configuring the recording schedule, you have to configure the settings on the **Motion Detection** and **Alarm Input Settings** interfaces. Please refer to *Section 9.1.1* and *Section 9.1.3* for detailed information.

- **Record Triggered by Event**

If you select **Event**, the video will be recorded if any of the events is triggered.

Besides configuring the recording schedule, you have to configure the event settings.

5. Select the record type, and click-and-drag the mouse on the time bar to set the record schedule.
6. Click **Save** to save the settings.

10.2 Configure Capture Schedule

Purpose:

You can configure the scheduled snapshot and event-triggered snapshot. The captured picture can be stored in the local storage or network storage.

Steps:

1. Enter the Capture Settings interface: **Configuration** > **Storage** > **Storage Settings** > **Capture**.

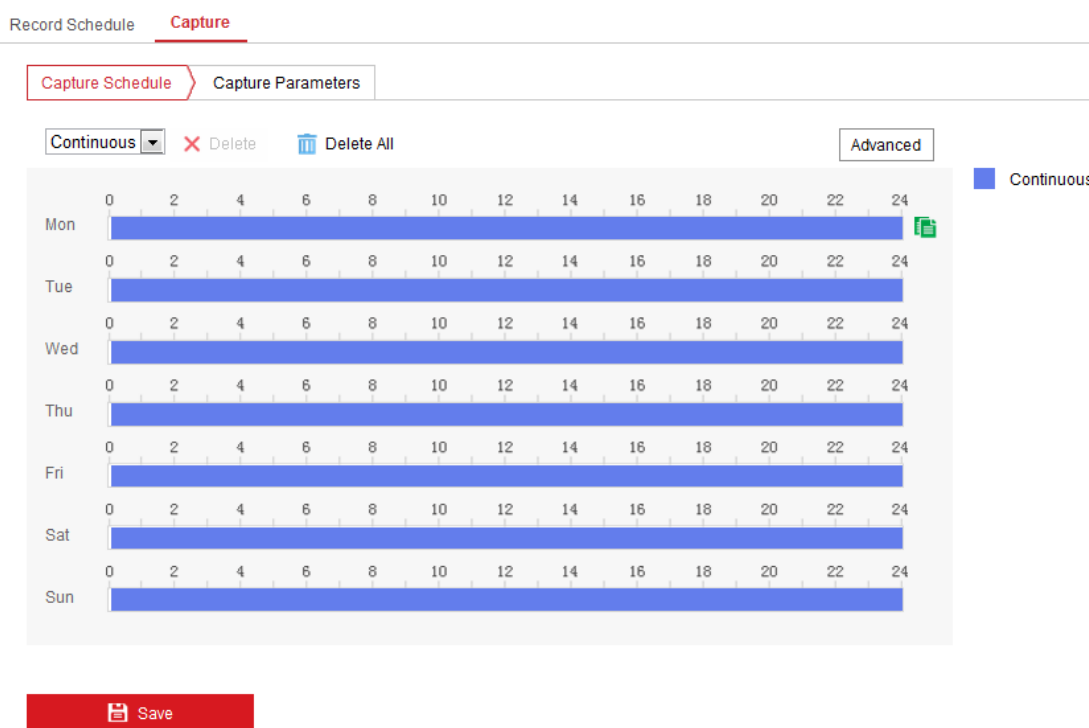

Figure 10-3 Capture Configuration

2. Go to **Capture Schedule** tab to configure the capture schedule by click-and-drag the mouse on the time bar. You can copy the record schedule to other days by clicking the green copy icon on the right of each time bar.
3. Click **Advanced** to select stream type.

Figure 10-4 Advanced Setting of Capture Schedule

4. Click **Save** to save the settings.
5. Go to **Capture Parameters** tab to configure the capture parameters.
 - (1) Check the **Enable Timing Snapshot** checkbox to enable continuous snapshot.
 - (2) Select the picture format, resolution, quality and capture interval.
 - (3) Check the **Enable Event-triggered Snapshot** checkbox to enable event-triggered snapshot.
 - (4) Select the picture format, resolution, quality, capture interval, and capture number.

Record Schedule **Capture**

Capture Schedule > Capture Parameters

Capture Number: 4

Save

Figure 10-5 Set Capture Parameters

6. Set the time interval between two snapshots.
7. Click **Save** to save the settings.

10.3 Configuring Net HDD

Before you start:

The network disk should be available within the network and properly configured to store the recorded files, log files, pictures, etc.

Steps:

1. Add Net HDD.
 - (1) Enter the Net HDD settings interface, **Configuration > Storage > Storage Management > Net HDD**.

HDD Management **Net HDD**

Net HDD				
HDD No.	Server Address	File Path	Type	Delete
1	10.10.36.61	/cxy_1	NAS	✘
Mounting Type <input type="text" value="SMB/CIFS"/> User Name <input type="text" value="cxy1"/> Password <input type="password" value="••••••"/> <input type="button" value="Test"/>				
2	10.10.36.252	/dvr/yanjian_1	NAS	✘
3			NAS	✘

Figure 10-6 Add Network Disk

- (2) Enter the IP address of the network disk, and enter the file path.
- (3) Select the mounting type. NFS and SMB/CIFS are selectable. And you can set the user name and password to guarantee the security if SMB/CIFS is selected.

Note: Please refer to the *NAS User Manual* for creating the file path.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
- *Proper configuration of all passwords and other security settings is the*

responsibility of the installer and/or end-user.

- (4) Click **Save** to add the network disk.
- 2. Initialize the added network disk.
 - (1) Enter the HDD Settings interface, **Configuration > Storage > Storage Management > HDD Management**, in which you can view the capacity, free space, status, type and property of the disk.

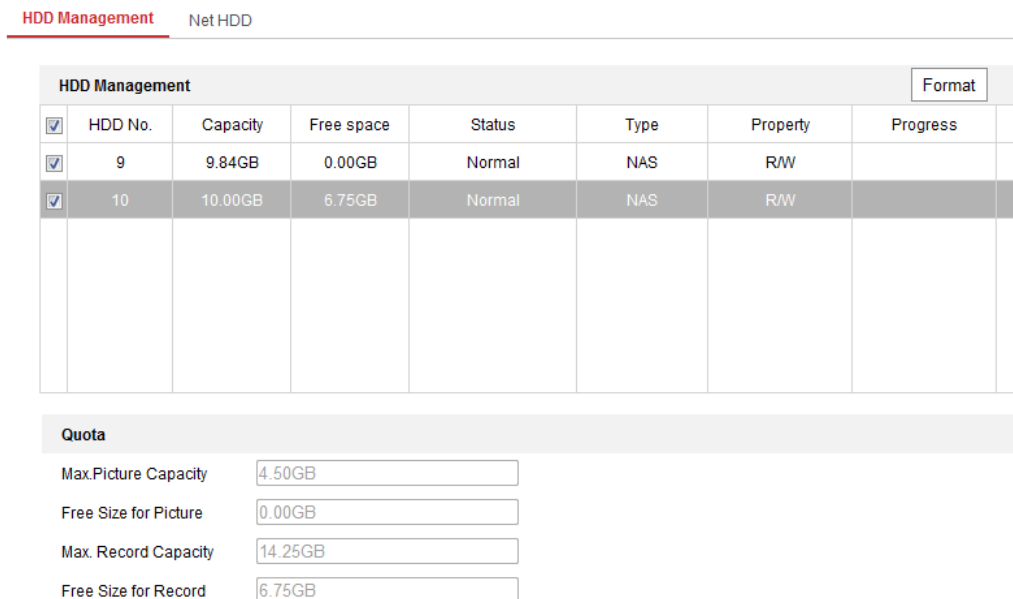

Figure 10-7 Storage Management Interface

- (2) If the status of the disk is **Uninitialized**, check the corresponding checkbox to select the disk and click **Format** to start initializing the disk.

When the initialization completed, the status of disk will become **Normal**.

Figure 10-8 View Disk Status

- 3. Define the quota for record and pictures.
 - (1) Input the quota percentage for picture and for record.
 - (2) Click **Save** and refresh the browser page to activate the settings.

Quota	
Max. Picture Capacity	<input type="text" value="4.75GB"/>
Free Size for Picture	<input type="text" value="4.75GB"/>
Max. Record Capacity	<input type="text" value="14.50GB"/>
Free Size for Record	<input type="text" value="14.50GB"/>
Percentage of Picture	<input type="text" value="25"/> %
Percentage of Record	<input type="text" value="75"/> %

 Save

Figure 10-9 Quota Settings

Note:

Up to 8 NAS disks can be connected to the camera.

Chapter 11 Playback

Purpose:

This section explains how to view the remotely recorded video files stored in the network disks or SD cards.

Steps:

1. Click **Playback** on the menu bar to enter playback interface.

Figure 11-1 Playback Interface

2. Select the date and click **Search**.

Figure 11-2 Search Video

3. Click  to play the video files found on this date.

The toolbar on the bottom of Playback interface can be used to control playing process.

Figure 11-3 Playback Toolbar

Table 11-1 Description of the buttons

Button	Operation	Button	Operation
	Play		Capture a picture
	Pause		Start/Stop clipping video files
	Stop		Audio on and adjust volume/Mute
	Speed down		Download
	Speed up		Playback by frame
	Enable/Disable digital zoom		

Note: You can choose the file paths locally for downloaded playback video files and pictures in Local Configuration interface.

You can also input the time and click to locate the playback point in the **Set playback time** field. You can also click to zoom out/in the progress bar.

Figure 11-4 Set Playback Time

Figure 11-5 Progress Bar

The different colors of the video on the progress bar stand for the different video types.

Figure 11-6 Video Types

Chapter 12 Picture

Click Picture to enter the picture searching interface. You can search, view, and download the pictures stored in the local storage or network storage.

Notes:

- Make sure HDD, NAS or SD card are properly configured before you process the picture search.
- Make sure the capture schedule is configured. Go to **Configuration > Storage > Schedule Settings > Capture** to set the capture schedule.

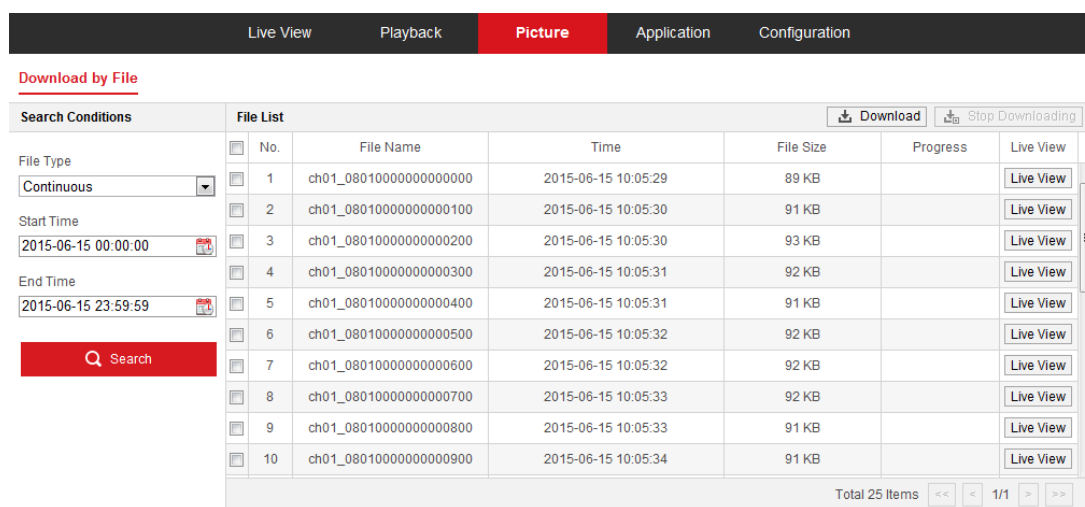

Figure 12-1 Picture Search Interface

Steps:

1. Select the file type from the dropdown list. Continuous, Motion, Alarm, Motion | Alarm, Motion & Alarm, Line Crossing, Intrusion Detection, and Scene Change Detection are selectable.
2. Select the start time and end time.
3. Click **Search** to start searching.
4. Click Live View to view the captured pictures.
5. Click Download to download the selected pictures.

Note:

Up to 4000 pictures can be displayed at one time.

Appendix

Appendix 1 SADP Software Introduction

● Description of SADP

SADP (Search Active Devices Protocol) is a kind of user-friendly and installation-free online device search tool. It searches the active online devices within your subnet and displays the information of the devices. You can also modify the basic network information of the devices using this software.

● Search active devices online

◆ Search online devices automatically

After launch the SADP software, it automatically searches the online devices every 15 seconds from the subnet where your computer locates. It displays the total number and information of the searched devices in the Online Devices interface. Device information including the device type, IP address and port number, etc. will be displayed.

Figure A.1.1 Searching Online Devices

Note:

Device can be searched and displayed in the list in 15 seconds after it went online; it will be removed from the list in 45 seconds after it went offline.

◆ Search online devices manually

You can also click  to refresh the online device list manually. The newly searched devices will be added to the list.

You can click  or  on each column heading to order the information; you can click  to expand the device table and hide the network parameter panel on the right side, or click  to show the network parameter panel.

● Modify network parameters**Steps:**

1. Select the device to be modified in the device list and the network parameters of the device will be displayed in the **Modify Network Parameters** panel on the right side.
2. Edit the modifiable network parameters, e.g. IP address and port number.
3. Enter the password of the admin account of the device in the **Password** field and click  to save the changes.

- *For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.*
- *Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.*

Figure A.1.2 Modify Network Parameters

Appendix 2 Port Mapping

The following settings are for TP-LINK router (TL-WR641G). The settings vary depending on different models of routers.

Steps:

1. Select the **WAN Connection Type**, as shown below:

Figure A.2.1 Select the WAN Connection Type

2. Set the **LAN** parameters of the router as in the following figure, including IP address and subnet mask settings.

Figure A.2.2 Set the LAN parameters

3. Set the port mapping in the virtual servers of **Forwarding**. By default, camera uses port 80, 8000 and 554. You can change these ports value with web browser or client software.

Example:

When the cameras are connected to the same router, you can configure the ports of a camera as 80, 8000, and 554 with IP address 192.168.1.23, and the ports of

another camera as 81, 8001, 555, 8201 with IP 192.168.1.24. Refer to the steps as below:

Steps:

1. As the settings mentioned above, map the port 80, 8000, 554 and 8200 for the network camera at 192.168.1.23
2. Map the port 81, 8001, 555 and 8201 for the network camera at 192.168.1.24.
3. Enable **ALL** or **TCP** protocols.
4. Check the **Enable** checkbox and click **Save** to save the settings.

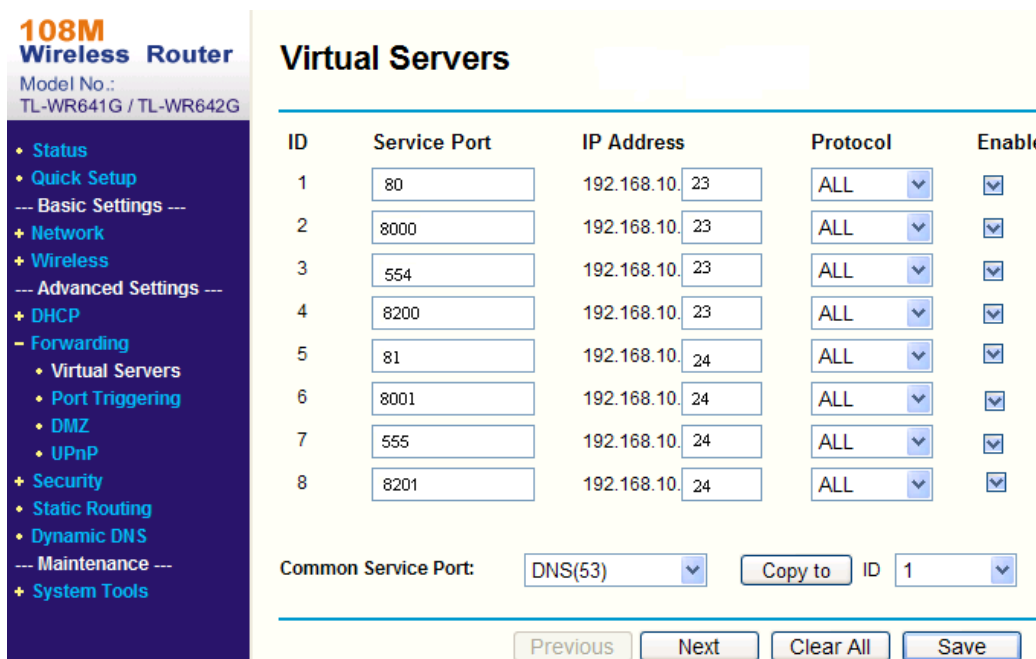

Figure A.2.3 Port Mapping

Note: The port of the network camera cannot conflict with other ports. For example, some web management port of the router is 80. Change the camera port if it is the same as the management port.

First Choice for Security Professionals
